Millimeter-Wave Communication Systems: Network Analysis and Hybrid Precoding Design Kai Yang,Minwei Shi,Hang Yuan,Zhitong Ni,2022-02-23 This book investigates the analytical framework and hybrid precoding scheme in millimeter wave networks Millimeter wave communication is a frontier technology for

supporting ultra high data rate transmissions in future wireless networks due to larger bandwidth and higher spectral efficiency. However, the involved interference characterization and increased energy consumption are two dominant limitations in millimeter wave network evolution. In this monograph, we develop a unified analytical framework for large scale millimeter wave communication networks which leads to abundant network design insights and guidelines. Under this framework, we design low complexity hybrid precoding algorithms for millimeter wave systems which greatly reduce energy consumption without obvious performance degradation. We would like to highlight that we develop a unified analytical framework and low complexity hybrid precoding mechanisms for millimeter wave communication networks where a variety of millimeter wave properties and hardware constraints are incorporated. The developed mechanisms can provide abundant insights and guidelines for the hybrid precoding design and analysis in millimeter wave communication networks. Graduate students, researchers, and engineers in the field of communication networks can benefit from the book *Full-Duplex Wireless Communications Systems* Tho Le-Ngoc, Ahmed Masmoudi, 2017-07-02. This book introduces the development of self interference (SI) cancellation techniques for full duplex wireless communication systems. The authors rely on estimation theory and signal processing to develop SI cancellation algorithms by generating an estimate of the received SI and subtracting it from the received signal. The authors also cover two new SI cancellation methods using the new concept of active signal injection (ASI) for full duplex MIMO OFDM systems. The ASI approach adds an appropriate cancelling signal to each transmitted signal such that the combined signals from transmit antennas attenuate the SI at the receive antennas. The authors illustrate that the SI pre-cancelling signal does not affect the data bearing signal. This book is for researchers and professionals working in wireless communications and engineers willing to understand the challenges of deploying full duplex and practical solutions to implement a full duplex system. Advanced level students in electrical engineering and computer science studying wireless communications will also find this book useful as a secondary textbook. **Official Gazette of the United States Patent and Trademark Office**, 2004. **Low-Power Wireless Communication Circuits and Systems** Kiat Seng Yeo, Kaixue Ma, 2018-05-03. The increasing demand for extremely high data rate communications has urged researchers to develop new communication systems. Currently, wireless transmission with more than one Giga bits per second (Gbps) data rates is becoming essential due to increased connectivity between different portable and smart devices. To realize Gbps data rates, millimeter wave (MMW) bands around 60 GHz are attractive due to the availability of large bandwidths of 9 GHz. Recent research work in the Gbps data rates around 60 GHz band has focused on short range indoor applications such as uncompressed video transfer, high speed file transfer between electronic devices and communication to and from kiosks. Many of these applications are limited to 10 m or less because of the huge free space path loss and oxygen absorption for 60 GHz band MMW signal. This book introduces new knowledge and novel circuit techniques to design low power MMW circuits and systems. It also focuses on unlocking the potential applications of the 60 GHz band for high speed outdoor applications.

The innovative design application significantly improves and enables high data rate low cost communication links between two access points seamlessly The 60 GHz transceiver system on chip provides an alternative solution to upgrade existing networks without introducing any building renovation or external network laying works
