## **Types In Logic Programming:**

*Types in Logic Programming* Frank Pfenning,1992 This collection of original research papers assesses and summarizes the impact of types on logic programming Type theory is a well established branch of theoretical computer science that has played an important role in the development of imperative and functional programming languages This collection of original research papers assesses and summarizes the impact of types on logic programming It covers all of the major themes in this burgeoning field including simple types regular tree types polymorphic types subtypes and dependent types Language design issues as well as semantics pragmatics and applications of types are discussed The benefits that type considerations have to offer logic programming are being increasingly realized through type checking many errors can be caught before a program is run resulting in more reliable programs types form an expressive basis for module systems since they prescribe a machine verifiable interface for the code encapsulated within a module and types may be used to improve performance of code generated by a compiler The research in this collection describes these benefits as well as important differences in the impact of types in functional and logic programming

**Modes and Types in Logic Programming** Jan-Georg Smaus,1999    A Theory of Types and Type Inference in Logic Programming Languages Jiyang Xu,1989    Functional and Logic Programming Keisuke Nakano,Konstantinos Sagonas,2020-09-08 This book constitutes the proceedings of the 15th International Symposium on Functional and Logic Programming FLOPS 2020 held in Akita Japan in September 2020 The 12 papers presented in this volume were carefully reviewed and selected from 25 submissions They cover all aspects of the design semantics theory applications implementations and teaching of declarative programming focusing on topics such as functional programming logic programming declarative programming constraint programming formal method model checking program transformation program refinement and type theory The conference was held virtually due to the COVID 19 pandemic

Functional and Logic Programming Masami Hagiya,Philip Wadler,2006-04-06 This book constitutes the refereed proceedings of the 8th International Symposium on Functional and Logic Programming FLOPS 2006 held in Fuji Susono Japan in April 2006 The 17 revised full papers presented together with 2 invited contributions were carefully reviewed and selected from 51 submissions The papers are organized in topical sections on data types FP extensions type theory LP extensions analysis contracts as well as Web and GUI

**A Theory of Types and Type Inference in Logic Programming** State University of New York at Stony Brook. Department of Computer Science,J. Xu,D. S. Warren,1988    Logic Programming Robert Kowalski,Kenneth A. Bowen,1988 These two volumes collect papers presented at the first joint meeting

of the two principal logic programming conferences held in August of 1988. The more than fifty contributions cover all aspects of the field including applications particularly those that exploit the unique character of logic programming, the role of logic programming in artificial intelligence, deductive databases, relations to other computational paradigms, language issues, methodology, implementations on sequential and parallel architectures and theory. Logic Programming is included in the Logic Programming series Research Reports and Notes edited by Ehud Shapiro.

**Logic Programming** Patricia M. Hill, David S. Warren, 2009-07-24. This book constitutes the refereed proceedings of the 25th International Conference on Logic Programming ICLP 2009 held in Pasadena CA USA in July 2009. The 29 revised full papers together with 9 short papers, 4 invited talks, 4 invited tutorials and the abstracts of 18 doctoral consortium articles were carefully reviewed and selected from 69 initial submissions. The papers cover all issues of current research in logic programming, namely semantic foundations, formalisms, nonmonotonic reasoning, knowledge representation, compilation, memory management, virtual machines, parallelism, program analysis, program transformation, validation and verification, debugging, profiling, concurrency, objects, coordination, mobility, higher order types, modes, programming techniques, abductive logic programming, answer set programming, constraint logic programming, inductive logic programming, alternative inference engines and mechanisms, deductive databases, data integration, software engineering, natural language, web tools, internet agents, artificial intelligence, bioinformatics.

*Logic Programming*, 1988. 1988 papers presented at the joint meeting of the Fifth International Conference on Logic Programming and the Fifth Symposium on Logic Programming.

*On the Use of Types in Logic Programming* Gregor Meyer, 1996.

*Logic Programming* Christoph Beierle, Lutz Plümer, 1995. This text aims at promoting a convergence between the technical challenges of developing advanced software systems and the formal techniques, tools and features evolving from the logic programming paradigm. It provides contributions towards different aspects of logic programming.

**Natural Language Understanding and Logic Programming, III** Charles Grant Brown, Gregers Koch, 1991. Addressed in this third workshop on natural language understanding and logic programming are a wide variety of issues and some interesting challenges for future work. For temporal expressions the intriguing question is examined: Can we in fact provide the translation from the HOL system logic to NL and vice versa? Can we now develop NL systems that take advantage of this logic and particularly can we extend the system to deal with duration? Also a strong formal linguistic base for natural language understanding programs is presented as well as other topics including temporal persistence, natural semantics and logic and alternative parses.

*Symposium on Logic Programming*, 1987.

**Logic Programming** Andrei Voronkov, 1992. This volume contains the proceedings of two Russian conferences on logic programming held in 1990 in Irkutsk and in 1991 in St Petersburg. The aim of the conferences was to bring together researchers from the Russian and the international logic programming communities. Topics covered in the volume include logic programming, automated theorem proving, non-monotonic reasoning, applications of mathematical logic to computer science, deductive databases, implementation

of declarative concepts and programming in non classical logics This is the first volume to represent activity in the field of logic programming in the countries of the former Soviet Union PUBLISHER S WEBSITE Logic Programming I. Balbin,K. Lecot,2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography **Principles and Practice of Declarative Programming** ,2006
