Witte, 2012-12-06 Hans Marko Munich Federal Republic of Germany 1 As a charter member of the MUNCHNER KREIS and the organizer of this symposium I take pleasure in welcoming you to these rooms of the Carl Friedrich von Siemens Foundation 2 I am pleased that we have succeeded in gathering together such a large and distinguished body of professionally qualified people to discuss new developments and directions in broadband communication 3 This is the first symposium of the MUNCHNER KREIS a supranational organization whose aim is to provide an international forum where not only the technical aspects but also the social and economic implications of new communications media might be discussed on an interdisciplinary basis Professor Witte Chairman of the MUNCHNER KREIS will have more to say concerning the organization's goals 4 The physical world in which we live is hallmarked by two major forces energy and information From the sociological and economic standpoints they can equally be viewed as major needs 5 Whereas in the energy sector there are restrictions and limitations that curb development at every turn this is not the case in the information sector On the contrary information engineering offers a host of new possibilities many of which are realizable now or in the near future thanks to new technologies Among the more obvious examples are semiconductor technology electronic computers satellite engineering

Optimal Design of Experiments Peter Goos, Bradley Jones, 2011-06-28 This is an engaging and informative book on the modern practice of experimental design The authors writing style is entertaining the consulting dialogs are extremely enjoyable and the technical material is presented brilliantly but not overwhelmingly The book is a joy to read Everyone who practices or teaches DOE should read this book Douglas C Montgomery Regents Professor Department of Industrial Engineering Arizona State University It's been said Design for the experiment don't experiment for the design This book ably demonstrates this notion by showing how tailor made optimal designs can be effectively employed to meet a client's actual needs It should be required reading for anyone interested in using the design of experiments in industrial settings Christopher J Nachtsheim Frank A Donaldson Chair in Operations Management Carlson School of Management University of Minnesota This book demonstrates the utility of the computer aided optimal design approach using real industrial examples These examples address questions such as the following How can I do screening inexpensively if I have dozens of factors to investigate What can I do if I have day to day variability and I can only perform 3 runs a day How can I do RSM cost effectively if I have categorical factors How can I design and analyze experiments when there is a factor that can only be changed a few times over the study How can I include both ingredients in a mixture and processing factors in the same study How can I design an experiment if there are many factor combinations that are impossible to run How can I make sure that a time trend due to warming up of equipment does not affect the conclusions from a study How can I take into account batch information in when designing experiments involving multiple batches How can I add runs to a botched experiment to resolve ambiguities While answering these questions the book also shows how to

evaluate and compare designs This allows researchers to make sensible trade offs between the cost of experimentation and the amount of information they obtain
