

Understanding Computer Networks

A network is a set of computing devices that are connected to share and send data electronically. Put your knowledge of networks to the test by matching each different part of a computer network to its image and definition.

router		A piece of hardware that has a large memory drive for file storage. It responds to requests across a computer network.
switch		A small computer that keeps the packets in a network moving between devices and the Internet.
Internet		A machine that receives text and image data from a computer and prints it onto paper.
server		A device with connection ports for lots of other devices to connect to a computer network.
wireless connection		A large network of computers connected to each other all around the world.
client		A set of wires covered in insulating material that connect different devices so that they can communicate with one another.
printer		A system by which data is transmitted through radio signals instead of wires or cables.
cable		A computer or computer-controlled device that can connect to the server via cables or wirelessly.

Did You Know...?

Networks come in different sizes. A LAN (local area network) is a small network, usually found in a home.

Take It Further

Can you think of some advantages of using a computer network?
