Marshall and Worthing's The Construction of Houses Duncan Marshall, Derek Worthing, Nigel Dann, Roger Heath, 2021-03-30. The sixth edition of The Construction of Houses builds on the success of the previous five editions. The book provides a comprehensive introduction to the principles and processes of the construction of houses and their services. As such it is aimed at providing a broad understanding of domestic building construction for students as part of their academic studies and as a useful information source for practitioners. The existing chapters have all been updated and most of them expanded to take account of changes to dwelling house construction since the last edition and there are new chapters on Modern Methods of Construction and Regulatory controls and building standards. Additionally many new and or updated photographs and diagrams have been added. As with the previous editions the authors have concentrated on presenting current mainstream approaches to the construction of houses. The detailed yet accessible text that is supported by hundreds of coloured photographs and diagrams provides clear explanations of the many complex processes that go into the building of a house. A deeper insight into modern construction is also given by the book's consideration of historical building techniques from the 18th century onwards in order to illustrate how and why we build houses in the way we do now.

Surveying Historic Buildings David Watt, 2015-07-17. This bestselling book has been fully revised and updated to include valuable new case studies and examples which help to demonstrate the common problems found in older buildings. It features many additional photographs illustrating the decay mechanisms and individual issues associated with damp, timber decay, masonry defects, roofing problems and many other aspects. The book begins by summarizing the basics of surveying practice including the inspection, assessment, defect diagnosis and monitoring of defects. It then examines the building elements discussing their construction, typical faults and their diagnoses. This section provides specific advice on assessing industrial monuments and features concise inspection checklists for ease of reference. In the final section the author looks to the future considering the specific challenges faced by property professionals when employed to survey historic buildings. The book is accompanied by comprehensive appendices including sample survey forms and a list of useful contacts is followed by an extensive bibliography. This book will be of particular interest to conservation officers, surveyors, architects, archaeologists and planners.

Building Maintenance Brian J.B. Wood, 2009-09-28. Maintaining a building is expensive it costs many times more to run a building over its lifetime than to build it yet maintenance is often not accorded the priority it warrants. A poorly maintained building will be a drain on resources and will impair building use whereas a well maintained building will function smoothly and represent an appreciating asset to its owners. Building Maintenance is a core text on the technical

aspects of maintenance for undergraduate degree students on built environment courses particularly building surveying and facilities management It addresses the who what where when how and why of maintenance activities and shows that maintenance should be considered seriously at the design stage Extensive case studies illustrate what can go wrong how to put matters right and how to get it right first time next time A professional approach is required to building maintenance By encouraging maintenance managers to stand back and take a strategic view of building maintenance alongside their day to day tasks this book will help practitioners and students to achieve that
