

Responsible

Recognises activities that ensure the building is designed, procured, built, and handed over in a responsible manner.

Healthy

Promotes actions and solutions that improve the physical and mental health of occupants.

Resilient

Encourages solutions that address the capacity of the building to bounce back from short-term shocks and long-term stresses.

Positive

Encourages a positive contribution to key environmental issues of carbon, water, and the impact of materials.

Places

Supports the creation of safe, enjoyable, integrated and comfortable places.

People

Encourages solutions that address the social health of the community.

Nature

Encourages active connections between people and nature and rewards creating biodiverse green spaces in cities.

Leadership

Recognises projects that set a strategic direction, build a vision for industry, or enhance the industry's capacity to innovate.

Framework Green Building:

Green Building in Developing Countries Zhonghua Gou, 2019-07-30 The book reveals how green buildings are currently being adapted and applied in developing countries It includes the major developing countries such as China Indonesia Malaysia Thailand Pakistan Cambodia Ghana Nigeria and countries from the Middle East and gathers the insights of respected green building researchers from these areas to map out the developing world's green building revolution The book highlights these countries contribution to tackling climate change emphasising the green building benefits and the research behind them The contributing authors explore how the green building revolution has spread to developing countries and how national governments have initiated their own green building policies and agendas They also explore how the market has echoed the green building policy and how a business case for green buildings has been established In turn they show how an international set of green building standards in the form of various techniques and tools has been incorporated into local building and construction practices In closing they demonstrate how the developing world is emerging as a key player for addressing the energy and environmental problems currently facing the world The book helps developers designers and policy makers in governments and green building stakeholders to make better decisions on the basis of global and local conditions It is also of interest to engineers designers facility managers and researchers as it provides a holistic picture of how the industry is responding to the worldwide call for greener and more sustainable buildings

The LEED Guidelines, 2003 A future with a diminishing supply of nonrenewable resources is raising concerns in every aspect of our lives The phrase 'sustainable' or 'green' development is being used to describe a wide variety of issues that take these concerns into consideration during the planning design and implementation process In an effort to increase the number of green buildings developed throughout the country the United States Green Building Council USGBC established the Leadership in Energy and Environmental Design LEED Guidelines The guidelines are a framework which assists members of a development team to quantify whether or not a project is in fact 'green' or 'sustainable' The guidelines provide a step by step approach within several categories associated with green development The goals of this paper will be to explore how the guidelines have already been implemented on a city level in an effort to encourage the development of green buildings Along with an understanding of how the guidelines have been used to promote green development there will be a discussion of what the potential benefits of green development would be if implemented on a county level and why such practices have not already occurred

Research Anthology on Environmental and Societal Well-Being Considerations in Buildings and Architecture Management Association, Information Resources, 2021-05-28 When it comes to architecture there has been a focus on sustainable buildings and human well being in the built environment

Buildings should not only be environmentally friendly and sustainable but dually focused on human health wellness and experience This includes considerations into the quality of buildings ranging from ventilation to thermal comfort along with environment considerations such as energy usage and material selection Specific architectural choices and design for buildings can either contribute to or negatively impact both society and the environment leading research in the field of architecture to be focused on environmental and societal well being in accordance with the built environment The Research Anthology on Environmental and Societal Well Being Considerations in Buildings and Architecture focuses on how the built environment is being constructed to purposefully enhance societal well being while also maintaining green standards for environmental sustainability On one side this book focuses on the specific building choices that can be made for the purpose of human well being and the occupants who will utilize the building On the other side this book also focuses on environmental sustainability from the standpoint of green buildings and environmental concerns Together these topics allow this book to have a holistic view of modern architectural choices and design This book is essential for architects IT professionals engineers contractors environmentalists interior designers civil planners regional government officials construction companies policymakers practitioners researchers academicians and students interested in architecture and how it can promote environmental and societal well being

Green Building Illustrated Francis D. K. Ching, Ian M. Shapiro, 2020-11-19 FULLY ILLUSTRATED UPDATED GUIDE TO THE STRATEGIC DESIGN OF GREEN BUILDINGS In the tradition of Building Construction Illustrated Francis D K Ching and Ian M Shapiro offer a fully illustrated guide to the theory and practice of sustainable design This guide provides architects designers and builders in the green design professional community a framework and detailed strategies for designing substantively green buildings With a focus on sustainable sites approaching and reaching net zero energy low and zero water usage minimum impact materials and superior indoor environmental quality this guide explains why we need to build green as well as green building theory and advancements in the industry This Second Edition includes All new case studies featuring geographically diverse buildings with proven zero energy performance Expanded coverage of zero energy building design as well as zero water and zero waste buildings Practical guidance for the schematic design of high performance buildings heating and hot water system selection building envelope details and integrating renewable energy Advanced strategies such as the concept of shape efficiency and the optimal location for stairwells in buildings Additional strategies for affordability in green design and construction Updated references to the latest codes and standards This Second Edition of Green Building Illustrated is an excellent resource for professionals students and those interested in the design and construction of sustainable buildings

Building Codes and Regulations: Navigating Compliance in Building Services Charles Nehme, Building codes and regulations form the backbone of modern building services ensuring that structures are safe efficient and sustainable As the complexity of buildings increases so too does the web of standards that govern their design construction and operation For professionals in the fields

of HVAC electrical and plumbing services navigating this landscape is critical not only to ensure compliance but also to deliver systems that promote safety comfort and energy efficiency In my career spanning over 30 years I have witnessed firsthand the evolving nature of building codes and the challenges they present to engineers contractors and facility managers alike What once seemed like a straightforward process has transformed into a sophisticated practice requiring deep knowledge of not only local regulations but also international standards and best practices This book *Building Codes and Regulations Navigating Compliance in Building Services* is born out of my experience in the HVAC and construction industries It is designed to provide a comprehensive overview of the critical codes and regulations that shape the field of building services specifically focusing on HVAC electrical and plumbing systems My goal is to demystify these codes and present them in a way that is both accessible and practical for professionals at all levels Throughout this book you will find detailed discussions on key standards including the International Building Code IBC National Electrical Code NEC and standards from bodies like ASHRAE and NFPA We will explore how these regulations intersect with energy efficiency initiatives fire safety and accessibility requirements among others More importantly I aim to provide insights into the approval process inspection requirements and best practices to help you avoid common pitfalls In addition to regulatory knowledge this book emphasizes the importance of staying informed in an ever changing industry New technologies climate change considerations and the push for sustainability are all shaping the future of building services and understanding how these trends impact building codes will be key to remaining competitive and compliant in the years ahead It is my hope that this book will serve as a valuable resource for engineers architects contractors and anyone involved in the design construction or maintenance of building systems Whether you are navigating codes for the first time or seeking to deepen your expertise the insights provided here will guide you in creating systems that meet today s stringent requirements while preparing for tomorrow s innovations Thank you for embarking on this journey with me Sincerely Charles Nehme
