Work And Technology:

The Internet in the Workplace Patricia Wallace, 2004-02-02 The capabilities offered by netcentric technologies might seem to eliminate the need for physical workplace altogether but the workplace remains partly because the virtual and in fact the physical appearance of a typical office looks about the same Nevertheless the psychological characteristics of the workplace have changed considerably Workers from the mail room clerk to the CEO are learning new skills to capitalize on the net's power but avoid the egregious blunders that the net so dramatically amplifies In *The Internet in the Workplace* Wallace shows how netcentric technologies touch every kind of workplace and explores the challenges and dilemmas they create

The Future of Work, Technology, and Basic Income Michael Cholbi, Michael Weber, 2019-07-08 Technological advances in computerization and robotics threaten to eliminate countless jobs from the labor market in the near future These advances have reignited the debate about universal basic income The essays in this collection offer unique and compelling perspectives on the ever changing nature of work and the plausibility of a universal basic income to address the elimination of jobs from the workforce The essays address a number of topics related to these issues including the prospects of libertarian and anarchist justifications for a universal basic income the positive impact of a basic income on intimate laborers such as sex workers and surrogates the nature of bad work and who will do it if everyone receives a basic income whether a universal basic income is objectionably paternalistic and viable alternatives to a universal basic income This book raises complex questions and avenues for future research about universal basic income and the future of work in our increasingly technological society It will be of keen interest to graduate students and scholars in political philosophy economics political science and public policy who are interested in these debates

Technology and the Future of Work Paul S. Adler, 1992 This book brings together a set of essays exploring the implications of new technologies in the workplace The common premise of the contributions is that the effective implementation of automation in manufacturing and engineering operations will typically require a workforce with a higher skill profile Examining the experience of countries in Europe Australia Asia and the U S the book analyzes four themes the new competencies required for effective implementation of new technologies how firms can develop these new competencies the implications of these changes for industrial relations and how firms can weave together business strategy technology strategy and personnel strategy to build competitive advantage with greater rather than lesser skills This argument contradicts the conventional assumption that automation will not only reduce the number of workers required to produce a given product but also require less skilled workers to do so
