Natural Science Imaging and Photography Michael R. Peres, 2021-03-11 This book provides an in-depth exploration of scientific photography. Highlighting the best practices needed to make, distribute, and preserve scientific visual information using digital photographic methods and technologies, it offers solutions to some of the biggest challenges facing photographers. Written by a team of international award-winning image makers with over 300 years of cumulative experience, this comprehensive resource explains the foundations, the tools required, and the steps needed for creating the optimal photograph in a range of environments and circumstances. Topics covered include ethical practices, aerial photography, close-up and macro photography, computational photography, field photography, geological photography, imaging with invisible spectrums, photographing small animals in captivity, time-based imaging, image processing in science. Showcasing modern methods, this book equips readers with the skills needed to capture and process the best image possible. Designed for basic and intermediate photographers, *Natural Science Imaging and Photography* exists as an essential contemporary handbook.

Local Policies and the European Social Fund Katharina Zimmermann, 2019-10-02 This book reviews how local social and employment policy fields react to the European Social Fund (ESF) to determine the role of the ESF in local activation policies. Drawing on both sociology and political science literature on welfare state reforms, the author examines what shapes local policy reactions to ESF and what effects these reactions have on change in local policy fields. Comparing data from 18 local case studies across 6 European countries and deploying an innovative mixed-method approach, the book presents comparative evidence on everyday challenges in the context of the ESF and discusses how these findings are applicable to other funding schemes.

Vectors in Physics and Engineering Alan Durrant, 2019-02-25 This text is an introduction to the use of vectors in a wide range of undergraduate disciplines. It is written specifically to match the level of experience and mathematical qualifications of students entering undergraduate and Higher National programmes and it assumes only a minimum of mathematical background on the part of the reader. Basic mathematics underlying the use of vectors is covered, and the text goes from fundamental concepts up to the level of first-year examination questions in engineering and physics. The material treated includes electromagnetic waves, alternating current, rotating fields, mechanisms, simple harmonic motion, and vibrating systems. There are examples and exercises, and the book contains many clear diagrams to complement the text. The provision of examples allows the student to become proficient in problem-solving and the application of the material to a range of applications from science and engineering demonstrates the versatility of vector algebra as an analytical tool.
