The Vestibular System T. Gualtierotti, 2012-12-06 Vestibular physiology has acquired new interest in the past few years The development of fast aircraft beginning during the Second World War and continuing through modern supersonic jets and space travel has increased dramatically the acceleration range to which man is subjected from prolonged weightlessness to several gs The labyrinth measures all kinds of acceleration including gravity and therefore has taken on particular importance in the study of human health in the Space Age It is understandable then that NASA sponsored the Symposium on Vestibular Function and Morphology a satellite of the Eighth Annual Meeting of the Society of Neuroscience held October 30 November 1 1978 at the University of Pittsburgh which also supported the symposium The present volume was developed from papers originally presented there My strategy in editing this book has been to focus upon the vestibular end organ and its direct connections both peripheral and central in order to assure a coherent discussion of the basics of vestibular function structure and ultrastructure Fortunately it was possible to secure the contributions of a number of outstanding investigators from both the United States and abroad including functionally oriented morphologists ultrastructuralists biophysicists and vestibular physiologists The result is a comprehensive discussion of the main mechanisms of the labyrinth the transduction process at the receptor level in the semicircular canals and in the utricular and saccular maculae the information transfer through neuronal pathways to the nuclei and the cerebellum and the general organization of the system

introduction to a panel discussion on eye movements Lastly reviews and points of view on peripheral and central vestibular disorders are covered in the remaining sections This work is of great benefit to anatomists physiologists and clinicians

System Part 1: Basic Mechanisms H.H. Kornhuber,2012-12-06 The details of the receptor mechanism are not yet fully
understood for any sensory system However sufficient data are available for the vestibular system and for other systems to
permit meaningful tracking of the sensory messages through the nervous system and via conscious experience The reception

cells and muscle fibers are collectively referred to as mind Sensory physiologists tend to disbelieve in extrasensory
perception Sensory physiology in general is an area upon which different sciences and methods converge Anatomists
physiologists psychologists physicists chemists and engineers have made important contributions to sensory physiology What
is special about vestibular physiology is the fact that many research workers are clinicians living under the constant pressure
of their patient s demands This is a disadvantage when it comes to writing handbooks but an advantage for the pa tient since
research is guided by clinical practice and can be quickly applied Modern methods such as recording from single nerve units
and the correlation of electrophysiological and psychophysical data have greatly contributed to our knowledge yet the study
of lesions is still important especially in the vestibular field
