THE SCIENTIFIC CONSCIENCE

CATHERINE
ROBERTS

Lewis Mumford has said of this book:

"The special value of Dr. Roberts' criticisms of science comes from the fact that she became aware of its inadequacies as a method and a world-view while in the midst of a successful career as a scientist. She is not against science itself when under rational direction and moral control—that goes without saying—but against a method and a philosophy that loses out important human values. Her work, therefore, is part of a broadening stream of criticism from within science, represented by people as eminent as Michael Polanyi, Soren Gyng and Rosalind Dukes."

The Scientific Conscience:

Consciousness as a Scientific Concept Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences

Consciousness ,

The Ethics of Today's Science and Technology Wenchao Li, Hans Poser, 2008 Beneath the discussion and clarification of problems of which both sides agreed to have them in common and which are documented in this volume one of the important insights on both sides had been disagreements depending on a different way in seeing articulating and reflecting on these problems So the English term science in differing from the German Wissenschaft which includes not only sciences of nature but also humanities is meant in the Western tradition as the uninterested research for truth especially for most general laws but the Chinese understanding seems to be characterized by an immediate connection of science and its practical use

Science, Faith and Society Michael Polanyi,1964-08-15 In its concern with science as an essentially human enterprise Science Faith and Society makes an original and challenging contribution to the philosophy of science On its appearance in 1946 the book quickly became the focus of controversy Polanyi aims to show that science must be understood as a community of inquirers held together by a common faith science he argues is not the use of scientific method but rather consists in a discipline imposed by scientists on themselves in the interests of discovering an objective impersonal truth That such truth exists and can be found is part of the scientists faith Polanyi maintains that both authoritarianism and scepticism attacking this faith are attacking science itself

The Humanistic Background of Science Philipp Frank,2021-10-01 Philipp Frank 1884 1966 was an influential philosopher of science public intellectual and Harvard educator whose last book *The Humanistic Background of Science* is finally available Never published in his lifetime this original manuscript has been edited and introduced to highlight Frank s remarkable but little known insights about the nature of modern science insights that rival those of Karl Popper and Frank s colleagues Thomas Kuhn and James Bryant Conant As a leading exponent of logical empiricism and a member of the famous Vienna Circle Frank intended his book to provide an accessible engaging introduction to the philosophy of science and its cultural significance The book is steadfastly true to science to aspirations of peace unity and human flourishing after World War II and to the pragmatic philosophies of Charles S Peirce William James and John Dewey that Frank embraced in his new American home Amidst the many recent surveys and retrospective analyses of midcentury philosophy of science *The Humanistic Background of Science* offers an original first hand view of Frank s post European life and of intellectual dramas then unfolding in Chicago New York City and Boston

Consciousness and the Brain Gordon Globus,2012-12-06 The relationship of consciousness to brain which Schopenhauer grandly referred to as the world knot remains an unsolved problem within both philosophy and science The central focus in what follows is the relevance of science from psychoanalysis to neurophysiology and quantum physics to the mind brain puzzle Many would argue that we have advanced little since the age of the Greek philosophers and that the extraordinary accumulation of neuroscientific knowledge in this century has helped not at all Increasingly philosophers and scientists have tended to go

their separate ways in considering the issues since they tend to differ in the questions that they ask the data and ideas which are provided for consideration their methods for answering these questions and criteria for judging the acceptability of an answer But it is our conviction that philosophers and scientists can usefully interchange at least to the extent that they provide co strains upon each other s preferred strategies and it may prove possible for more substantive progress to be made Philosophers have said some rather naive things by ignoring the extraordinary advances in the neurosciences in the twentieth century The skull is not filled with green cheese On the other hand the arrogance of many scientists toward philosophy and their faith in the scientific method is equally naive Scientists clearly have much to learn from philosophy as an intellectual discipline
