

Special Theory of Relativity

It is the generally accepted and experimentally well-confirmed physical theory regarding the relationship between space and time.

It is based on two postulates:-

- The laws of physics are invariant in all inertial systems.
- The speed of light in a vacuum is the same for all observers, regardless of the motion of the light source.

Flat and Curved Space-times George Francis Rayner Ellis,Ruth M. Williams,2000 The present book explains special relativity and the basics of general relativity from a geometric viewpoint Space time geometry is emphasised throughout and provides the basis of understanding of the special relativity effects of time dilation length contraction and the relativity of simultaneity Bondi's K calculus is introduced as a simple means of calculating the magnitudes of these effects and leads to a derivation of the Lorentz transformation as a way of unifying these results The invariant interval of flat space time is generalised to that of curved space times and leads to an understanding of the basic properties of simple cosmological models and of the collapse of a star to form a black hole The appendices enable the advanced student to master the application of four tensors to the relativistic study of energy and momentum and of electromagnetism In addition this new edition contains up to date information on black holes gravitational collapse and cosmology
