Adaptive Processing for Space Based Radar Performance Analysis Using Cramer Rao Bounds Waveform Diversity Radar Handbook Merrill Ivan Skolnik,1990 This edition is the most comprehensive and informative available on radar systems and technology Thoroughly revised and updated to reflect the advances made in radar over the past two decades Charts graphs

Radar Handbook ,2008 Radar System Performance Modeling G. Richard Curry,2005 Turn to this expanded second edition of an Artech House bestseller for the most current and comprehensive coverage of radar system performance analysis and system level modeling This revised edition features new material on airborne and space based radar radar tracking techniques radar system design and operational and performance issues It also provides new detailed examples problem sets and solutions and a comprehensive self test to evaluate your understanding *Advances in Sensing With Security Applications* J. S. Byrnes,Jim Byrnes,2006 The fusion of basic ideas in mathematics biology and chemistry with ongoing improvements in hardware and computation offers the promise of much more sophisticated and accurate sensing capabilities than currently exist Coupled with the dramatic rise in the need for surveillance in innumerable aspects of our daily lives brought about by hostile acts deemed unimaginable only a few short years ago the time is ripe for scientists in the diverse areas of sensing and security to join together in a concerted effort to combat the new brands of terrorism The contents of this volume can be divided into three broadly defined but interrelated areas 1 The increasing need for fast and accurate sensing what is the threat 2 The scientific underpinnings of the ongoing revolution in sensing 3 Specific sensing algorithms and techniques

Transionospheric Synthetic Aperture Imaging Mikhail Gilman, Erick Smith, Semyon Tsynkov, 2017-04-13 This landmark monograph presents the most recent mathematical developments in the analysis of ionospheric distortions of SAR images and offers innovative new strategies for their mitigation As a prerequisite to addressing these topics the book also discusses the radar ambiguity theory as it applies to synthetic aperture imaging and the propagation of radio waves through the ionospheric plasma including the anisotropic and turbulent cases In addition it covers a host of related subjects such as the mathematical modeling of extended radar targets as opposed to point wise targets and the scattering of radio waves off those targets as well as the theoretical analysis of the start stop approximation which is used routinely in SAR signal processing but often without proper justification The mathematics in this volume is clean and rigorous no assumptions are hidden or ambiguously stated The resulting work is truly interdisciplinary providing both a comprehensive and thorough exposition of the field as well as an accurate account of a range of relevant physical processes and phenomena The book is intended for applied mathematicians interested in the area of radar imaging or more generally remote sensing as well as physicists and electrical electronic engineers who develop operate spaceborne SAR sensors and perform the data processing The methods in the book are also useful for researchers and practitioners working on other types of imaging Moreover the book is accessible to graduate students in applied mathematics physics engineering and related disciplines Praise for Transionospheric Synthetic Aperture Imaging I perceive that this text will mark a turning point in the field of synthetic aperture radar research and practice I believe this text will instigate a new era of more rigorous image formation relieving the research development and practitioner communities of inconsistent physical assumptions and numerical approaches Richard Albanese Senior Scientist Albanese Defense and Energy Development LLC **Spaceborne Weather Radar** R. Meneghini, Toshiaki Kozu, 1990 Spaceborne Weather Radar details statistical methods estimation algorithms and design techniques for the measurement of rainfall and cloud cover from space
