Mathematical Methods for Signal and Image Analysis and Representation Luc Florack, Remco Duits, Geurt Jongbloed, Marie Colette van Lieshout, Laurie Davies, 2012-01-13 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception

Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny, 2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence Three major classes of optic flow computation techniques can be discriminated see for a good overview Beauchemin and Barron

IBeauchemin 1995 1 gradient based or differential methods phase based or frequency domain methods correlation based or area methods feature point or sparse data tracking methods In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method The method originally proposed by Florack and Nielsen Florack 1998a is known as the Multiscale Optic Flow Constraint Equation MOFCE This is a scale space version of the well known computer vision implementation of the optic flow constraint equation as originally proposed by Horn and Schunck Horn 1981 This scale space variation as usual consists of the introduction of the aperture of the observation in the process The application to stereo has been described by Maas et al Maas 1995a Maas 1996a Of course difficulties arise when structure emerges or disappears such as with occlusion cloud formation etc Then knowledge is needed about the processes and objects involved In this chapter we focus on the scale space approach to the local measurement of optic flow as we may expect the visual front end to do

17 2 Motion detection with pairs of receptive fields As a biologically motivated start we begin with discussing some neurophysiological findings in the visual system with respect to motion detection
