There are four different types of angina that exist, and they are as follows:

- **Stable angina** : Stable angina is the most common type of angina and usually takes place when someone participates in exerting physical activities.
- **Unstable angina** : Unstable angina, as the name suggests, is more unpredictable and can occur when the person is resting. This kind of pain can be more severe and could keep getting worse.
- **Microvascular angina** : Microvascular angina can occur during moments of physical exertion, in the middle of one's daily routine, or during moments of a patient experiencing strong emotions.
- **Variant angina** : Variant angina, which is also known as Prinzmetal angina, is caused due to a spasm in the patient's arteries, which reduces blood flow. This kind of angina usually occurs in cycles, mostly when the patient is resting or asleep, and can be treated using angina medication.
