**Mathematical Modeling in Agriculture** Sabyasachi Pramanik,Niranjanamurthy M.,Ankur Gupta,Ahmed J. Obaid,2024-10-16 The main goal of the book is to explore the idea behind data modeling in smart agriculture using information and communication technologies and tools to make agricultural practices more functional fruitful and profitable The research in the book looks at the likelihood and level of use of implemented technological components with regard to the adoption of different precision agricultural technologies To identify the variables affecting farmers choices to embrace more precise technology zero inflated Poisson and negative binomial count data regression models were utilized Outcomes from the count data analysis of a random sample of various farm operators show that various aspects including farm dimension farmer demographics soil texture urban impacts farmer position of liabilities and position of the farm in a state were significantly associated with the approval severity and likelihood of precision farming technologies Farm management information systems FMIS have constantly advanced in complexity as they have incorporated new technology the most recent of which is the internet However few FMIS have fully tapped into the internet s possibilities and the newly developing idea of precision agriculture receives little or no support in the FMIS that are now being sold FMIS for precision agriculture must meet a few more criteria beyond those of regular FMIS which increases the technological complexity of these systems deployment in a number of ways In order to construct an FMIS that meet these extra needs the authors here evaluated various cutting edge web based methods The goal was to determine the requirements that precision agriculture placed on FMIS

**Understanding Options for Agricultural Production** G.Y. Tsuji, G. Hoogenboom, P.K. Thornton, 1998-01-31 The first premise of this book is that farmers need access to options for improving their situation In agricultural terms these options might be management alternatives or different crops to grow that can stabilize or increase household income that reduce soil degradation and dependence on off farm inputs or that exploit local market opportunities Farmers need a facilitating environment in which affordable credit is available if needed in which policies are conducive to judicious management of natural resources and in which costs and prices of production are stable Another key ingredient of this facilitating environment is information an understanding of which options are viable how these operate at the farm level and what their impact may be on the things that farmers perceive as being important The second premise is that systems analysis and simulation have an important role to play in fostering this understanding of options traditional field experimentation being time consuming and costly This book summarizes the activities of the International Benchmark Sites Network for Agrotechnology Transfer IBSNAT project an international initiative funded by the United States Agency for International Development USAID IBSNAT was an attempt to demonstrate the effectiveness of understanding options through systems analysis and simulation for the ultimate benefit of farm households in the tropics and subtropics The idea for the book was first suggested at one of the last IBSNAT group meetings held at the University of Hawaii in 1993
