Metaphor and Analogy in Science Education Peter J. Aubusson,Allan G. Harrison,Stephen M. Ritchie,2006-06-28 Years ago a primary teacher told me about a great series of lessons she had just had The class had visited rock pools on the seashore and when she asked them about their observations they talked about it was like a factory it was like a church it was like a garden it was like our kitchen at breakfast time etc Each student s analogy could be elaborated and these analogies provided her with strongly engaged students and a great platform from which to develop their learning about biological diversity and interdependence In everyday life we learn so many things by comparing and contrasting The use of analogies and metaphors is important in science itself and their use in teaching science seems a natural extension but textbooks with their own sparse logic do not help teachers or students David Ausubel in the 1960s had advocated the use of advance organisers to introduce the teaching of conceptual material in the sciences and some of these had an analogical character However research on the value of this idea was cumbersome and indecisive and it ceased after just a few studies In the 1980s research into children s conceptions of scientific phenomena and concepts really burgeoned and it was soon followed by an exploration of a new set of pedagogical strategies that recognised a student in a science class is much more than a tabula rasa

Understanding Chemistry Fred M. Dewey,1994 **Measuring the Development of Conceptual Understanding in Chemistry** Jennifer Marie Claesgens,2007 Dennett's Philosophy Don Ross,Andrew Brook,David Thompson,2000 These essays which grew out of a conference attended by Dennett consider evolution intentionality consciousness ontology and ethics and free will *Multiple Representations in Chemical Education* John K. Gilbert,David Treagust,2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In

bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education *Fundamentals of Sustainable Chemical Science* Stanley E. Manahan,2009-03-10 Written by Stanley Manahan *Fundamentals of Sustainable Chemical Science* has been carefully designed to provide a basic introduction to chemistry including organic chemistry and biochemistry for readers with little or no prior background in the subject Manahan bestselling author of many environmental texts presents the material in a practical *Understanding Chemistry* Robert J.
