Understanding Flying Weather:

Understanding Flying Weather Derek Piggott, 2004 Understanding Flying Weather is Derek Piggott's introduction to meteorology for glider and light aeroplane pilots. In simple and accessible terms it explains how atmospheric phenomena can be used to improve flying performance and to make flying both economical and enjoyable. Taking into account advances in satellite and computer technology Understanding Flying Weather describes pressure patterns, cloud formation and how soaring conditions can be used to advantage as well as detailing the effects of depressions, anti-cyclones and local topography. Its uncomplicated text and diagrams cover the syllabus for the British Gliding Association Bronze C Certificate and so will be particularly relevant to those studying for this important examination.

Handbook of Aviation Neuropsychology Robert Bor, Carina Eriksen, Randy J. Georgemiller, Alastair L. Gray, 2024-11-11 The field of aviation neuropsychology helps us to understand and improve human performance and safety in the aerospace industry both for the estimated 300 000 commercial pilots and the 4.5 billion passengers they transport every year. This handbook brings together a group of internationally renowned academic and industry experts to provide a comprehensive overview of the background, goals, principles, challenges and associated practice skills and research themes of aviation neuropsychology. After an introduction to the history and development of aviation psychology, additional sections focus on the importance of prevention and resilience to enhance airline workers' cognitive and mental functioning to reduce the risk of human errors and accidents as well as the different aspects of assessment including pilot medical certification, neuropsychological testing and cultural considerations. Additional chapters explore how we can learn from past errors and build on existing strengths. Finally, special aspects are examined including the role of different common conditions, e.g. neurological and psychological disorders and report writing in aviation. Readers will find the book full of unique insights, theory and research giving them a comprehensive overview of the field. While the book is designed primarily for health care professionals, neuropsychologists, clinical psychologists, aviation psychologists, aviation medical examiners, neurologists and flight safety specialists, it will be of interest to other professionals inside and outside of aviation including professionals in other safety-critical settings or researchers looking to improve safety in the aviation industry.
