disciplinary book highlights the challenges involved in the collective initiation design implementation and evaluation of water planning and management processes It demonstrates how successful management requires the effective handling of two participatory processes the stakeholder water management process and the co engineering process required to organise this The book provides practical methods for supporting improved participatory processes including the application of theory and models to aid decision making International case studies of these applications from Australia Europe and all over the world including Africa are used to examine negotiations and leadership approaches and their effects on the participatory stakeholder processes This international review of participatory water governance forms an important resource for academic researchers in hydrology environmental management and water policy and also practitioners and policy makers working in water management

Transpiration and Multiple Use Management of Thinned Emory Oak Coppice D. Catlow Shipek,2004
The effects of thinning Emory oak *Quercus emoryi* coppice on transpiration have been estimated by the heat pulse velocity HPV method Rootstocks of trees harvested for fuelwood were thinned to one two or three dominant stump sprouts or left as unthinned controls Differences in transpiration rates of the thinned coppice were found for each treatment and the control Earlier research has also shown that thinning of Emory oak stump sprouts influences the growth and volume of the residual coppice and its value for wildlife habitats Therefore a decision matrix is presented to help in the management of thinned Emory oak coppice for optimal combinations of water wood and wildlife benefits
