[Handbook of Seafood and Seafood Products Analysis](#) Fidel Toldrá, Leo Nollet, 2024-03-08 Seafood and seafood products represent some of the most important foods in almost all types of societies around the world. More intensive production of fish and shellfish to meet high demand has raised some concerns related to the nutritional and sensory qualities of these cultured fish in comparison to their wild-catch counterparts. In addition, the variety in processing, preservation, and storage methods from traditional to modern is contributing to an increase in variability in consumer products. This second edition of the *Handbook of Seafood and Seafood Products Analysis* brings together the work of 109 experts who focus on the most recent research and development trends in analytical techniques and methodologies for the analysis of captured, fresh, and preserved seafood, either cultivated or wild, as well as for derived products. Chemistry and biochemistry focuses on the analysis of main chemical and biochemical compounds of seafood.
