Understand Surgery:

Aesthetic Surgery of the Abdominal Wall Melvin A. Shiffman, Sid Mirrafati, 2005-11-02 We have come a long way since the days when abdominal wall contouring was performed by simple dermolipectomies with no attention to diastasis correction and muscular reinforcement and little regard for the final aesthetic result Nowadays an abdominoplasty may be indicated for even the most demanding of patients Details such as placement of the incision and umbilicoplasty are meticulously planned so as to conceal undesirable scars Since the advent of suction assisted lipectomy in association with a classical operation or as an isolated procedure the plastic surgeon has become capable of remodeling the entire trunk assuring removal of considerable amounts of adipose tissue Drs Shiffman and Mirrafati have brought all of these aspects together in this most timely book **Aesthetic Surgery of the Abdominal Wall** Here the reader will find an all encompassing textbook written in collaboration with outstanding colleagues all of whom have contributed to this field of plastic surgery that has been of particular interest to me I am sure that for both the younger and the more experienced surgeon this book will become a reference text covering all aspects of plastic abdominal surgery Ivo Pitanguy MD Preface This book on aesthetic surgery of the abdominal wall is an attempt to bring together the existing knowledge on body contouring of the abdomen The major emphasis is on abdominoplasty and liposuction of the abdomen with the various combinations and techniques

Advances toward improved understanding and treatment of uncommon ovarian cancer types and subtypes
Robb Hollis, Mihaela Carmen Cristea, Mignon Van Gent, 2024-10-22 Ovarian cancer is an umbrella term for a collection of
distinct disease entities histotypes Until now the majority of research has focussed on the most common histotype high grade
serous ovarian carcinoma HGSOC which accounts for 70% of cases The less common histotypes including endometrioid clear
cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far less research attention
Accordingly while major advances in our understanding of HGSOC have led to molecularly directed therapies that improve
patient outcomes progress in less common histotypes has lagged behind Notably many of the uncommon histotypes
demonstrate resistance to conventional chemotherapy regimens and their inherent biological differences suggest most are
unlikely to respond to emerging molecular therapeutics designed to target the biology of common ovarian cancer types
