Wind Loading of Structures John D. Holmes, 2018-10-09 A Definitive Up to Date Reference Wind forces from various types of extreme wind events continue to generate ever increasing damage to buildings and other structures

Wind Loading of Structures Third Edition fills an important gap as an information source for practicing and academic engineers alike explaining the principles of wind loads on structures including the relevant aspects of meteorology bluff body aerodynamics probability and statistics and structural dynamics

Written in Line with International Standards Among the unique features of the book are its broad view of the major international codes and standards and information on the extreme wind climates of a large number of countries of the world

It is directed towards practicing particularly structural engineers and academics and graduate students

The main changes from the earlier editions are Discussion of potential global warming effects on extreme events More discussion of tornados and tornado generated damage A rational approach to gust durations for structural design Expanded considerations of wind induced fatigue damage Consideration of aeolian vibrations of suspended transmission lines Expansion of the sections on the cross wind response of tall slender structures Simplified approaches to wind loads on porous industrial mining and oil gas structures A more general discussion of formats in wind codes and standards Not dedicated to a specific code or standard

Wind Loading of Structures Third Edition highlights the general format and procedures related to all major codes and standards addresses structures of various types and presents you with topics not typically covered in traditional texts such as internal pressures fatigue damage by wind forces and equivalent static wind load distributions
