Federal Register ,2000-12-14 *Topics Surrounding the Combinatorial Anabelian Geometry of Hyperbolic Curves II* Yuichiro Hoshi,Shinichi Mochizuki,2022-05-20 The present monograph further develops the study via the techniques of combinatorial anabelian geometry of the profinite fundamental groups of configuration spaces associated to hyperbolic curves over algebraically closed fields of characteristic zero The starting point of the theory of the present monograph is a combinatorial anabelian result which allows one to reduce issues concerning the anabelian geometry of configuration spaces to issues concerning the anabelian geometry of hyperbolic curves as well as to give purely group theoretic characterizations of the cuspidal inertia subgroups of one dimensional subquotients of the profinite fundamental group of a configuration space We then turn to the study of tripod synchronization i e of the phenomenon that an outer automorphism of the profinite fundamental group of a log configuration space associated to a stable log curve induces the same outer automorphism on certain subquotients of such a fundamental group determined by tripods i e copies of the projective line minus three points The theory of tripod synchronization shows that such outer automorphisms exhibit somewhat different behavior from the behavior that occurs in the case of discrete fundamental groups and moreover may be applied to obtain various strong results concerning profinite Dehn multi twists In the final portion of the monograph we develop a theory of localizability on the dual graph of a stable log curve for the condition that an outer automorphism of the profinite fundamental group of the stable log curve lift to an outer automorphism of the profinite fundamental group of a corresponding log configuration space This localizability is combined with the theory of tripod synchronization to construct a purely combinatorial analogue of the natural outer surjection from the tale fundamental group of the moduli stack of hyperbolic curves over the field of rational numbers to the absolute Galois group of the field of rational numbers **Research Paper FPL-RP** ,1986 *New Techniques in Resolution of Singularities* Dan Abramovich,Anne Frühbis-Krüger,Michael Temkin,Jarosław Włodarczyk,2023-09-14 Resolution of singularities is notorious as a difficult topic within algebraic geometry Recent work aiming at resolution of families and semistable reduction infused the subject with logarithmic geometry and algebraic stacks two techniques essential for the current theory of moduli spaces As a byproduct a short a simple and efficient functorial resolution procedure in characteristic 0 using just algebraic stacks was produced The goals of the book the result of an Oberwolfach Seminar are to introduce readers to explicit techniques of resolution of singularities with access to computer implementations introduce readers to the theories of algebraic stacks and logarithmic structures and to resolution in families
