Words, Languages And Combinatorics - Proceedings Of The International Conference Masami Ito,1992-01-27 The topics included in this proceedings cover both mathematics and computer science They include Codes Free Monoids Transformation Semigroups Automata Formal Languages Word Problems Orders and Combinatorics Attention is paid to the algebraic theories of codes and rewriting systems which are the key subjects that combine these two fields The number of papers in the proceedings exceeds 45 and all papers have been refereed [Handbook of Automated Reasoning](#) Alan J.A. Robinson, Andrei Voronkov, 2001-06-22 **Handbook of Automated Reasoning** **Foundations of Software Technology and Theoretical Computer Science** Kesav V. Nori, Sanjeev Kumar, 1988-11-17 This volume contains the proceedings of the 8th Conference on Foundations of Software Technology and Theoretical Computer Science held in Pune India on December 21 23 1988 This internationally well established Indian conference series provides a forum for actively investigating the interface between theory and practice of Software Science It also gives an annual occasion for interaction between active research communities in India and abroad Besides attractive invited papers the volume contains carefully reviewed submitted papers on the following topics Automata and Formal Languages Graph Algorithms and Geometric Algorithms Distributed Computing Parallel Algorithms Database Theory Logic Programming Programming Methodology Theory of Algorithms Semantics and Complexity *Synthesizing Synchronous Systems by Static Scheduling in Space-Time* Björn Lisper, 1989-05-10 The subject of this book is the synthesis of synchronous hardware The purpose is to provide a firm mathematical foundation for the so called space time mapping methods for hardware synthesis that have been proposed during the last few years Thus the treatment is fairly mathematical In a space time mapping method an algorithm is described as a set of atomic events with possible data dependencies between them The task is to find a mapping assigning a space time coordinate to each event so that causality is not violated and the solution is good Previous work in the area if it provided any formalism at all has relied mainly on uniform recurrence equations extensions thereof or on purely graph theoretic formulations In this project algebra is used instead and the close connection with single assignment languages is stressed Thus it is possible to generalize previous work and to give simple characterizations of the type of algorithms that can be implemented with space time mappings The results presented can be applied to hardware construction and compiler techniques for parallel computers

High Performance Transaction Systems Dieter Gawlick, Mark Haynie, 1989-04-26 This Lecture Notes volume is based on the International Workshop on High Performance Transaction Systems held in the Asilomar Conference Center September 28 30 1987 Many of the problems identified during the workshop are liable to determine the future development of transaction systems and distributed high performance systems in general for many years to come So the organizers of HPTS 87 felt encouraged to collect the papers presented at the workshop in order to make them accessible to a wider audience of interested developers and researchers Since some of the contributions represented work in progress the authors agreed to

prepare revised and updated versions of their papers for this publication This accounts for the long delay between the event itself and the publication but on the other hand it provides the reader with a state of the art account of transaction processing topics The book is organized according to the major sections of the workshop In the network section the reader finds an analysis of two of the major paradigms in networking ISO OSI and SNA from the perspective of transaction processing In the next section four different transaction processing and database systems are described Model 204 a database management system marketed by Computer Corporation of America Tandem's NonStop SQL Citicorp's transaction processing system and ALCS which basically is a version of TPF running under MVS XA The section on architectural issues contains four very different contributions which are fairly representative of the type of problems in transaction systems investigated in the research community Finally performance evaluations and system comparisons are presented

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Llorenç Huguet, 1989-06-14 The present volume contains the proceedings of the AAEECC 5 Conference held at Menorca Balearic Islands June 15 19 1987 The annual International AAEECC Conference covers a range of topics related to Applied Algebra Error Correcting Codes Finite Algebraic Structures Computational Methods and Complexity in Algebra and Geometry For the AAEECC 5 Conference 73 papers were presented Out of these thirty papers were selected for publication in the proceedings They deal with topics such as error correcting codes concerning problems of covering radius decoding methods expert systems and general results in coding theory computational algebra Gröbner basis complexity finite algebra and graphs The proceedings of the 6th conference are published as Vol 357 of the Lecture Notes in Computer Science

Formal Techniques in Real-Time and Fault-Tolerant Systems Mathai Joseph, 1988-09-14 This book is based on material from current research projects and cooperations and from a recent workshop in the area of Knowledge Base Management Systems It contains 25 revised papers and related discussions that concentrate on the integration of Database Technology deductive databases extended relational technology object oriented systems and Artificial Intelligence in particular logic programming and knowledge representation The emphasis of the book is on the integration of DB AI technology required for knowledge Base Management Systems The book isolates major conceptual contributions systems extensions and research directions that lead towards that goal This book is a European counterpart to another volume in the Topics in Information Systems Series On Knowledge Base Management Systems resulting from a North American workshop and edited by M Brodie and J Mylopoulos which concentrates on theoretical results and the more abstract levels of Knowledge Base Management

Logic at Botik '89 Albert R. Meyer, Michael A. Taitslin, 1989-06-07 The present volume contains the proceedings of Logic at Botik 89 a symposium on logical foundations of computer science organized by the Program Systems Institute of the USSR Academy of Sciences and held at Pereslavl Zalesky USSR July 3 8 1989 The scope of the symposium was very broad the topics of interest were complexity of formal systems constructive mathematics in computer science denotational and operational semantics of

programs descriptive complexity dynamic and algorithmic logics and schematology formal tools to describe concurrent computations lambda calculus and related topics foundations of logic programming logical foundations of database theory logics for knowledge representation modal and temporal logics type theory in programming and verification of programs Thus the papers in this volume represent many interesting trends in logical foundations of Computer Science ranging from purely theoretical research to practical applications of theory

Rewriting Techniques and Applications, 1991 *Notes on Set Theory* Josep Díaz, 1989 The axiomatic theory of sets is a vibrant part of pure mathematics with its own basic notions fundamental results and deep open problems It is also viewed as a foundation of mathematics so that to make a notion precise simply means to define it in set theory This book gives a solid introduction to pure set theory through transfinite recursion and the construction of the cumulative hierarchy of sets and also attempts to explain how mathematical objects can be faithfully modeled within the universe of sets In this new edition the author has added solutions to the exercises and rearranged and reworked the text to improve the presentation

Tree

Automata and Languages M. Nivat, A. Podelski, 1992-11-08 The theory of tree languages founded in the late Sixties and still active in the Seventies was much less active during the Eighties Now there is a simultaneous revival in several countries with a number of significant results proved in the past five years A large proportion of them appear in the present volume The editors of this volume suggested that the authors should write comprehensive half survey papers This collection is therefore useful for everyone interested in the theory of tree languages as it covers most of the recent questions which are not treated in the very few rather old standard books on the subject Trees appear naturally in many chapters of computer science and each new property is likely to result in improvement of some computational solution of a real problem in handling logical formulae data structures programming languages on systems algorithms etc The point of view adopted here is to put emphasis on the properties themselves and their rigorous mathematical exposition rather than on the many possible applications This volume is a useful source of concepts and methods which may be applied successfully in many situations its philosophy is very close to the whole philosophy of the ESPRIT Basic Research Actions and to that of the European

ICCAL 89 is the second in a series of

International Conferences on Computer Assisted Learning The first one was organized by the Institute for Computer Assisted Learning ICAL of the University of Calgary May 87 The success of this first ICCAL demonstrated the need for a regular international high caliber conference on post secondary education which brings together an expanded list of issues concerning computer learning The coherency of the ICCAL conference series is assured by an international steering committee and a group of experts in the field acting as the advisory board This volume consists of about forty papers selected by the program committee from one hundred submissions It also includes printed versions of a number of invited presentations by outstanding scholars in the field

Advances in Object-Oriented Database Systems Klaus R.

Dittrich,1988 This volume collects papers presented at the 2nd International Workshop on Object Oriented Database Systems ooDBS II held at the Ebernburg near Bad M nster am Stein FRG in September 1988 It thus gives a comprehensive overview of the latest developments in this flourishing area of current database research Object oriented database systems have been approached with mainly two major intentions in mind namely to better support new application areas like CAD CAM office automation knowledge engineering and to overcome the impedance mismatch between data models and programming languages The notion of object orientation in database systems is thus a broader one than e g in the area of programming languages Structural object orientation provides for data model mechanisms that allow the direct representation and manipulation of highly structured entities behavioral object orientation cares for facilities to associate arbitrary user defined type specific operations with data entities finally full object orientation tries to combine the advantages of both categories Though data model concepts are the decisive feature of object oriented database systems numerous other system aspects have to be reconsidered or allow better solutions respectively in this light They include e g transactions implementation techniques optimization formalization the inclusion of rules and the integration with other systems A number of research prototypes and even some commercial systems are meanwhile available Both approaches to extend databases with object oriented capabilities and approaches to extend object oriented programming languages with database features have been and are being investigated
