**Union Learning Representatives** Alex Alexandrou, 2013-10-18 Trade unions have historically been involved in education and training in the workplace. This activity has gained greater credence and importance in the United Kingdom, New Zealand and Denmark due to the recent emergence of union learning representatives (ULRs) and Educational Ambassadors who are a new category of trained, accredited and unpaid lay representatives based in the workplace. Their key role is to give advice and guidance to colleagues in relation to professional development, learning and training opportunities available. These representatives work in partnership with other stakeholders, namely employers and education providers to ensure that individuals can attend educational and training courses that will help them from both a personal and work perspective. There are now 22,000 ULRs in the UK alone and they are playing a significant part in pushing the present Labour administration's drive to expand and improve lifelong learning to create a learning society that benefits individuals, organisations and ultimately the nation and its economy. They have rewritten the rules of the workplace by helping to replace distrust and adversarial relations with partnership working based on mutual respect and trust. This book was published as a special issue of the *Journal of In Service Education*.

VET. With contributions from a panel of leading international scholars, the Handbook contains 27 authoritative essays from a wide range of disciplines. The contributors present an integrated analysis of the complex and dynamic field of VET. Drawing on the most recent research, thinking and practice in the field, the book explores the key debates about the role of VET in the education and training systems of various nations. The Handbook reveals how expertise is developed in an age of considerable transformation in work processes, work organization and occupational identities. The authors also examine many of the challenges of vocational education and training, such as the impact of digital technologies on employment, the demand for re-training in the context of extended working lives, the emergence of learning regions and skill ecosystems, and the professional development of vocational teachers and trainers. This important text offers an original view of VET's role in both the initial and continuing development of expertise. Examines the theories and concepts that underpin international perspectives and explores the differences about the purposes of VET. Presents various models of learning used in VET, including apprenticeship and their relationship with general education. Explores how VET is shaped in different ways by the political economy of different countries. Reviews how developments in digital technologies are changing VET practice. Discusses the challenges for universities offering higher vocational education programs. Draws on both recent research as well as historical accounts. Written for students, researchers and scholars in the

fields of educational studies human resource development social policy political economy labor market economics industrial relations sociology The Wiley Handbook of Vocational Education and Training offers an international perspective on the topic of VET
