Structural Methods In Pattern Recognition:

Structural Methods in Pattern Recognition Laurent Miclet, 1986 **Structural Pattern Analysis** Roger Mohr, Theodosios Pavlidis, Alberto Sanfeliu, 1990 This book contains a selection of 14 papers presented at the workshop organised by the International Association for Pattern Recognition IAPR Technical Committee on Syntactical and Structural Pattern Recognition at Pont Mousson 1988 These papers which have been expanded focus on both fundamental aspects and applications They show that structural methods are a good framework for integrating both symbolic and numerical knowledge for modeling recognition and also learning The applications described are on document analysis speech and image analysis

Ten Lectures on Statistical and Structural Pattern Recognition M.I. Schlesinger, Václav Hlaváč, 2013-03-09 Preface to the English edition This monograph Ten Lectures on Statistical and Structural Pattern Recognition uncovers the close relationship between various well known pattern recognition problems that have so far been considered independent These relationships became apparent when formal procedures addressing not only known problems but also their generalisations were discovered The generalised problem formulations were analysed mathematically and unified algorithms were found The book unifies of two main streams in pattern recognition the statistical and structural ones In addition to this bridging on the uppermost level the book mentions several other unexpected relations within statistical and structural methods The monograph is intended for experts for students as well as for those who want to enter the field of pattern recognition The theory is built up from scratch with almost no assumptions about any prior knowledge of the reader Even when rigorous mathematical language is used we make an effort to keep the text easy to comprehend This approach makes the book suitable for students at the beginning of their scientific career Basic building blocks are explained in a style of an accessible intellectual exercise thus promoting good practice in reading mathematical text The paradoxes beauty and pitfalls of scientific research are shown on examples from pattern recognition Each lecture is amended by a discussion with an inquisitive student that elucidates and deepens the explanation providing additional pointers to computational procedures and deep rooted errors

[Syntactic And Structural Pattern Recognition - Theory And Applications](#) Horst Bunke, Alberto Sanfeliu, 1990-01-01 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the

self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book

Pattern Recognition J.P. Marques de Sá,2012-12-06 Pattern recognition currently comprises a vast body of methods supporting the development of numerous applications in many different areas of activity The generally recognized relevance of pattern recognition methods and techniques lies for the most part in the general trend of intelligent task emulation which has definitely pervaded our daily life Robot assisted manufacture medical diagnostic systems forecast of economic variables exploration of Earth's resources and analysis of satellite data are just a few examples of activity fields where this trend applies The pervasiveness of pattern recognition has boosted the number of task specific methodologies and enriched the number of links with other disciplines As counterbalance to this dispersive tendency there have been more recently new theoretical developments that are bridging together many of the classical pattern recognition methods and presenting a new perspective of their links and inner workings This book has its origin in an introductory course on pattern recognition taught at the Electrical and Computer Engineering Department Oporto University From the initial core of this course the book grew with the intent of presenting a comprehensive and articulated view of pattern recognition methods combined with the intent of clarifying practical issues with the aid of examples and applications to real life data The book is primarily addressed to undergraduate and graduate students attending pattern recognition courses of engineering and computer science curricula

Structural, Syntactic, and Statistical Pattern Recognition Terry Caelli,Adnan Amin,Robert P.W. Duin,Mohamed Kamel,Dick de Ridder,2003-08-02 This volume contains all papers presented at SSPR 2002 and SPR 2002 hosted by the University of Windsor Windsor Ontario Canada August 6-9 2002 This

was the third time these two workshops were held back to back SSPR was the ninth International Workshop on Structural and Syntactic Pattern Recognition and the SPR was the fourth International Workshop on Statistical Techniques in Pattern Recognition These workshops have traditionally been held in conjunction with ICPR International Conference on Pattern Recognition and are the major events for technical committees TC2 and TC1 respectively of the International Association of Pattern Recognition IAPR The workshops were held in parallel and closely coordinated This was an attempt to resolve the dilemma of how to deal in the light of the progressive specialization of pattern recognition with the need for narrow focus workshops without further fragmenting the field and introducing yet another conference that would compete for the time and resources of potential participants A total of 116 papers were received from many countries with the submission and reviewing processes being carried out separately for each workshop A total of 45 papers were accepted for oral presentation and 35 for posters In addition four invited speakers presented informative talks and overviews of their research They were Tom Dietterich Oregon State University USA Sven Dickinson the University of Toronto Canada Edwin Hancock University of York UK Anil Jain Michigan State University USA SSPR 2002 and SPR 2002 were sponsored by the IAPR and the University of Windsor
