Space Relations:

Space Relations Donald Barr, 1974 **Time and Space** Barry Dainton, 2016-04-15 The first edition 2001 of this title quickly established itself on courses on the philosophy of time and space This fully revised and expanded new edition sees the addition of chapters on Zeno's paradoxes speculative contemporary developments in physics and dynamic time making the second edition once again unrivalled in its breadth of coverage Surveying both historical debates and the ideas of modern physics Barry Dainton evaluates the central arguments in a clear and unintimidating way and is careful to keep the conceptual issues throughout comprehensible to students with little scientific or mathematical training The book makes the philosophy of space and time accessible for anyone trying to come to grips with the complexities of this challenging subject With over 100 original line illustrations and a full glossary of terms the book has the requirements of students firmly in sight and will continue to serve as an essential textbook for philosophy of time and space courses *The Shape of Space* Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich's classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non-realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion *Language and Space* Paul Bloom, 1999 The 15 essays in this volume bring together research and theoretical viewpoints in the areas of psychology linguistics anthropology and neuroscience presenting a synthesis across these diverse domains Throughout authors address and debate each others arguments and theories **Spatial Information Theory** Max J. Egenhofer, Nicholas Giudice, Reinhard Moratz, Michael Worboys, 2011-09-08 This book constitutes the refereed proceedings of the 10th International Conference on Spatial Information Theory COSIT 2011 held in Belfast ME USA in September 2011 The 23 revised full papers were carefully reviewed and selected from 55 submissions They are organized in topical sections on maps and navigation spatial change spatial reasoning spatial cognition and social aspects of space perception and spatial semantics and space and language *Toward a Directionalist Theory of Space* H. Scott Hestevold, 2020-07-02 In *Toward a Directionalist Theory of Space* On Going Nowhere H. Scott Hestevold formulates a new relationalist theory of space by appealing to the view that the universe is directioned in the sense that there exist directional relations a class of spatial relations that Leibniz overlooked Extending the directionalist relationalist theory of space to the problem of when it is that discrete objects compose a whole Hestevold revisits his answer to the Special Composition Question He also uses the directionalist relationalist theory to formulate reductivist theories of boundaries and holes theories that may allow one to resist the view that boundaries and holes are ontologically parasitic entities Finally he explores directionalism relationalism

vis vis spacetime After noting findings of modern physics that favor substantialist spacetime and then developing metaphysical concerns that favor instead directionalist relationalist spacetime Hestevold notes the ontological benefit of endorsing spatiotemporal directional relations even if spacetime substantialism is the winning theory
