Space And Time Scale Variability And Interdependencies In Hydrological Processes:

Space and Time Scale Variability and Interdependencies in Hydrological Processes R. A. Feddes, 1995-08-24 This book presents the integrated contributions of hydrologists meteorologists and ecologists to the first IHP IAHS George Kovacs Colloquium in connection with the study of global hydrology and climate change The atmospheric hydrological and terrestrial components of the Earth's systems operate on different time and space scales Resolving these scaling incongruities as well as understanding and modelling the complex interaction of land surface processes at the different scales represent a major challenge for hydrologists ecologists and meteorological scientists alike This book deals with time and space scale variations with reference to several topics including soil water balance ecosystems and interaction of flow systems and macroscale hydrological modelling This book will be of great use to researchers engineers and forecasters with an interest in space and time scale variability

Space and Time Scale and Variability and Interdependencies in Hydrological Process Reinder A. Feddes, 1992* **Integrating Hydrology, Ecosystem Dynamics, and Biogeochemistry in Complex Landscapes** J. D. Tenhunen, P. Kabat, 1999-08-10 In recent decades the biosphere has become increasingly stressed often beyond the point where the internal structure and function of ecosystems are sustained We have experienced an intensified exploration of natural system resources to support agricultural and forest production to provide water for human consumption to supply the needs of industrial processes and to provide in addition attractive diverse landscapes for recreation and tourism Exceeding thresholds via anthropogenic disturbance that results in degradation of ecosystems is dangerous since the system level effects and feedbacks e.g soil erosion famine polluted drinking water etc are highly undesirable Finding appropriate compromises in resource use that satisfy existing competitive interests and result in sound environmental management especially in densely populated regions requires an improved understanding of the trade offs that accompany changes in exploitation or altered resource allocation at regional and landscape scales Progress on landscape level understanding of coupled water carbon and nitrogen budgets is limited by a lack of commitment to a rigorous development and application of synthetic techniques e.g strongly linked remote sensing studies geographic information system applications computer simulation modeling and ecosystem experimentation more than by basic site level measurement alone Possible research approaches that will contribute to new use of ecosystem knowledge in a landscape and regional context were considered by this Dahlem Workshop The importance of conducting improved landscape and regional assessment of ecosystem function as input to global scale efforts of the International Geosphere Biosphere Programme is a major theme of this book

Echelles en Hydrologie Et Gestion de L'eau Ioulia Tchiguirinskaia, Michael Bonell, Pierre Hubert, 2004 **Advances in Theoretical Hydrology** J.P. O'Kane, 2016-09-01 This Festschrift containing sixteen invited essays and papers is a tribute

to the distinguished Irish hydrologist James Dooge on the occasion of his 70th birthday His former students colleagues and friends in fourteen countries have provided a varied selection on his favourite topics flow in open channels and unsaturated soil and also from his major interest of recent years large scale hydrology and global change The book has three sections The first section on hydrological processes contains six papers The second section on large scale hydrology has four papers Six historical reflective and philosophical essays on the past and future of the hydrological sciences form the third section of the book

Surface Water Hydrology V.P. Singh, M. Al-Rashed, M.M. Sherif, 2026-02-20 About one third of the land surface of the world is either arid or semi arid The lack of freshwater resources in these regions constitutes a major deterrent to their sustainable development Notwithstanding the water shortage water continues to be used unwisely wasted and polluted This book begins with a discussion about data collection and processing and continues with a discussion of the effect of climate change on water resources rainfall simulators and analysis of precipitation evaporation and evapotranspiration infiltration runoff modeling transport of sediment and agricultural chemicals flood and drought frequency analysis stochastic analysis and hydrologic applications Surface Water Hydrology will be of interest to researchers and practitioners in the field of hydrology environmental engineering agricultural engineering and watershed and range sciences as well as to those engaged in water resources planning development and management in arid and semi arid areas

Scaling Up in Hydrology Using Remote Sensing J. B. Stewart, 1996-06-24 Sealing up in Hydrology using Remote Sensing Edited by J B Stewart Institute of Hydrology UK E T Engman NASA Goddard Space Flight Center USA R A Feddes Wageningen Agricultural University The Netherlands Y Kerr Centre d Etudes Spatiales de la Biosphere France The most pressing modern environmental problems are considered to affect the entire globe For example climate change deforestation and desertification are all happening on such a large scale that they may affect the sustainability of man s future What is needed to address this question quantitatively are more reliable data on large scale land use and land use change and their impacts on water resources and climate The catch is that we are never going to be able to measure directly key hydrological and meteorological variables at enough points on the ground to give adequate description of the large areas regions and continents for which information is required The only way to get this is via large scale modelling and the development of remote sensing techniques This book brings together the presentations made at a recent workshop by experts who met to consider the problems of scaling up from local to global spatial scales and from the instantaneous satellite measurements to daily or longer time scales The authors collective views represent the state of the art of their science as seen by an active international remote sensing community and ground and planetary based measurement scientists and modellers The front cover illustration is reproduced courtesy of N Fey

Potential Impacts of Climate Change on Tropical Forest Ecosystems Adam Markham, 2013-11-11 Climate change represents one of the most alarming long term threats to ecosystems the world over This new collection of papers provides for the first time an overview of the potentially serious impact that climate change may have on tropical forests The authors a

multi disciplinary group of leading experts in climatology forestry ecology and conservation biology present a state of knowledge snapshot of how tropical forests are likely to react to the changes being wrought on our planet s atmosphere and climate Tropical forests represent extraordinary harbours for biological diversity and yet as deforestation and degradation continue apace they are under greater pressure from human impacts than ever before Climate change adds yet another threat to these valuable ecosystems and this volume demonstrates just how significant a problem this may really be The authors identify certain types of forest including tropical montane cloud forest that may be particularly vulnerable They also show the strong likelihood of global warming aggravating problems in already fragmented forest areas

Water, Environment and Society in Times of Climatic Change Arie S. Issar, N. Brown, 2013-04-17 Since the greenhouse effect emerged as a predictable threat necessitating the evaluation of its future impact on the environment in the various parts of the globe interest in the climate changes during the Holocene has gained momentum The background can be summarized by the sentence The past is a key to the future As a matter of fact this sentence is in the opposite direction on the dimension of time to the principle adopted by the founders of the science of geology They proposed that geological processes in the present should be used as a key for understanding the past Another reason for the interest in the history of the climate of the Holocene can be described as the renaissance of a modified deterministic approach to the inter relation between physical and human geography This relates in the first place to the fact that various investigations especially as carried out by Hubert Lamb showed that the sequence of climate changes previously suggested by Blytt and Sernander for Europe and adopted by most Holocene climatologists was far too general and that there were more climate changes during recent history than previously taken account of In the second place it was found out that these changes had had an impact on the history of human communities Thus one can conclude that once the taboo on geographical determinism is e
