Ippolito, Jr.,2008-09-15 Provides an invaluable detailed and up to date coverage of atmospheric effects and their impact on satellite communications systems design and performance Significant progress has been made in the last decade in the understanding and modelling of propagation effects on radio wave propagation in the bands utilized for satellite communications This book provides a comprehensive description and analysis of all atmospheric effects of concern for today s satellite systems and the tools necessary to design the links and to evaluate system performance This book will serve as an excellent reference to communications engineers wireless network and system engineers system designers and graduate students in satellite communications and related areas Key features Provides the state of the art in communications satellite link design and performance from the practicing engineer perspective concise descriptions specific procedures and comprehensive solutions Contains the calculations and tools necessary for evaluating system performance Provides a complete evaluation of atmospheric effects modelling and prediction Focuses on the satellite free space link as the primary element in the design and performance for satellite communications and recognizes the importance of free space considerations such as atmospheric effects frequency of operation and adaptive mitigation techniques a solutions manual is available directly from the author lippolit gwu edu Signal Design Techniques for Space Communications Systems Bartus Howard Batson,1967 Bandwidth-Efficient Digital Modulation with Application to Deep Space Communications Marvin K. Simon,2005-02-18 An important look at bandwidth efficient modulations with applications to today s Space program Based on research and results obtained at the California Institute of Technology s Jet Propulsion Laboratory this timely book defines describes and then delineates the performance power and bandwidth of digital communication systems that incorporate a wide variety of bandwidth efficient modulations appropriate for the design and implementation of space communications systems The author compares the performance of these systems in the presence of a number of practical non ideal transmitter and receiver characteristics such as modulator and phase imbalance

imperfect carrier synchronization and transmitter nonlinearity Although the material focuses on the deep space applications developed at the Jet Propulsion Laboratory the presentation is sufficiently broad as to be applicable to a host of other applications dealing with RF communications An important contribution to the scientific literature Bandwidth Efficient Digital Modulation with Application to Deep Space Communications was commissioned by the JPL Deep Space Communications and Navigation System Center of Excellence highlights many NASA funded technical contributions pertaining to deep space communications systems is a part of the prestigious Deep Space Communications and Navigation Series The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and communications by disseminating state of the art knowledge in key technologies

**Digital Satellite Communications Systems and Technologies** A. Nejat Ince, 2012-12-06 Among the space activities of the last three decades satellite communications SATCOM has found the widest application in meeting both civil and military communications requirements Several international regional and national SATCOM systems of increasing capacity capability and complexity have been and are being implemented over the years The latest versions are utilizing such concepts as spot beams processing transponders in SS TDMA and operations in different frequency bands including the EHF band On the military side the United States of America the United Kingdom France and NATO the North Atlantic Treaty Organisation have been the only owners and operators of military SATCOM systems in the West The systems in being and under development use satellites and ground terminals with characteristics which differ from the civilian ones with respect to frequency bands utilised and survivability and interoperability The SATCOM has given the military users the potential of having much needed mobility flexibility and survivability in strategic and tactical communications for land sea and air operations It must however be said particularly for the military SATCOM systems that they have been evolved in big jumps both in time and capability each jump involving the deployment of two or three often specially designed large satellites large expenses and rather traumatic transition between jumps Despite these undesirable features these systems did not have the required degree of suevivability and flexibility
