Council (U.S.). Space Applications Board,1985 Toward New Partnerships In Remote Sensing National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Steering Committee on Space Applications and Commercialization,2002-09-18 The technical scientific policy and institutional environment for conducting Earth science research has been changing rapidly over the past few decades Changes in the technical environment are due both to the advent of new types and sources of remote sensing data which have higher spatial and spectral resolution and to the development of vastly expanded capabilities in data access visualization spatial data integration and data management The scientific environment is changing because of the strong emphasis on global change research both nationally and internationally and the evolving data requirements for that research And the policy and institutional environment for the production of Earth observation data is changing with the diversification of both remote sensing data and the institutions that produce the data In this report the Space Studies Board s Steering Committee on Space Applications and Commercialization explores the implications of this changing environment examining the opportunities and challenges it presents **U.S. Commercial Remote Sensing Satellite Industry** Kevin M. O'Connell,2001 American firms have begun to operate their own imaging satellite systems aiming to become an important part of the U S commercial remote sensing industry To succeed over the long run these new U S commercial remote sensing satellite firms need a combination of reliable technologies government policies that encourage U S industry competitiveness a strong international presence and sound business plans to ensure their competitiveness in both the domestic and international marketplaces The greatest risks for the these firms come from the challenge of transforming themselves from imagery data providers to strong competitors as information age companies the need to master the technical risks of building and operating sophisticated imaging satellite systems and the requirement to operate effectively in a complex international business environment In addition the government\_s policymaking process has yet to achieve the degree of predictability timeliness and transparency that the firms need if they are expected to operate effectively in a highly competitive and rapidly changing global marketplace The authors conclude with six recommendations that the U S Department of Commerce should adopt to best fulfill its responsibilities for promoting the U S commercial remote sensing industry and for encouraging the competitiveness of new private imaging satellite firms *Space Optical Remote Sensing* Jiasheng Tao,2023-07-29 This book highlights the fundamentals technologies and methods of space optical remote sensing and system design The author introduces concepts and methods established during his decades of research and practice covering topics such as difference between the spatial resolution of pixel and the resolution of traditional film the resolution of remote sensing image for characteristics and target recognition purpose and image shift problem of sampling image space The book comprehensively and systematically introduces the basic concepts theories parameter design calculations of imaging cameras multispectral cameras surveying cameras infrared cameras and imaging spectrometers their respective system components and performance evaluation of space optical remote

sensing systems The book also discusses the overall design of space optical remote sensing systems including light sources the ground air system target characteristics spectrum selection energy calculation orbital parameters optical remote sensor parameters spacecraft parameters coordination and selection comprehensive analysis and large scale system performance evaluation methods forming a complete idea on how to achieve the goals of the system design The book enables readers to understand the working principles of the whole systems from a theoretical depth and grasp the full skillset on how to implement advantages and balance technical difficulties for orbit subsystems of the platform and payloads The book is a must read for those who seek to build strong ability for research development and innovation surrounding the subject matter
