Spatial Cognition:

 Spatial Cognition Christian Freksa,Christopher Habel,Karl F. Wender,2003-05-20 Research on spatial cognition is a rapidly evolving interdisciplinary enterprise for the study of spatial representations and cognitive spatial processes be they real or abstract human or machine Spatial cognition brings together a variety of search methodologies empirical investigations on human and animal orientation and navigation studies of communicating spatial knowledge using language and graphical or other pictorial means the development of formal models for r resenting and processing spatial knowledge and computer implementations to solve spatial problems to simulate human or animal orientation and navigation behavior or to reproduce spatial communication patterns These approaches can interact in interesting and useful ways Results from empirical studies call for formal explanations both of the underlying memory structures and of the processes operating upon them we can develop and plement operational computer models obeying the relationships between objects and events described by the formal models we can empirically test the computer models under a variety of conditions and we can compare the results to the sults from the human or animal experiments A disagreement between these results can provide useful indications towards the re nement of the models   *Spatial Cognition III* Christian Freksa,Wilfried Brauer,Christopher Habel,Karl F. Wender,2003-06-23 This third volume documents the results achieved within a priority program on spatial cognition funded by the German Science Foundation DFG The 23 revised full papers presented went through two rounds of reviewing and improvement and reflect the increased interdisciplinary cooperation in the area The papers are organized in topical sections on routes and navigation human memory and learning spatial representation and spatial reasoning

 Human Spatial Cognition and Experience Toru Ishikawa,2020-06-15 This book offers students an introduction to human spatial cognition and experience and is designed for graduate and advanced undergraduate students who are interested in the study of maps in the head and the psychology of space We live in space and space surrounds us We interact with space all the time consciously or unconsciously and make decisions and actions based on our perceptions of that space Have you ever wondered how some people navigate perfectly using maps in their heads while other people get lost even with a physical map What do you mean when you say you have a poor sense of direction How do we know where we are How do we use and represent information about space This book clarifies that our knowledge and feelings emerge as a consequence of our interactions with the surrounding space and show that the knowledge and feelings direct guide or limit our spatial behavior and experience Space matters or more specifically space we perceive matters Research into spatial cognition and experience asking fundamental questions about how and why space and spatiality matters to humans has thus attracted attention It is no coincidence that the 2014 Nobel Prize in Physiology or Medicine was awarded for research into a positioning system in the brain or inner GPS and that spatial information and technology are recognized as an important social infrastructure in recent years This is the first book aimed at graduate and advanced undergraduate students pursuing this fascinating area of

research The content introduces the reader to the field of spatial cognition and experience with a series of chapters covering theoretical empirical and practical issues including cognitive maps spatial orientation spatial ability and thinking geospatial information navigation assistance and environmental aesthetics **Spatial Cognition** Joan Stiles,Mark Kritchevsky,Ursula Bellugi,1988 This book offers a unique opportunity to share the combined efforts of scientists from varied disciplines including cognitive and developmental psychology neuropsychology behavioral neurology and neurobiology in the process of interacting and exchanging ideas *Applied Spatial Cognition* Gary L. Montello,2023-10-02 This book integrates the science of spatial cognition and the science of team cognition to explore the social psychological and behavioral phenomenon of spatial cognition as it occurs in human collectives such as dyads and work teams It represents the culmination of a process of outlining and defining a growing field of research termed Collective Spatial Cognition It engages contributions from an international and multi disciplinary community of scholars who have collaborated to provide a

foundation for knowledge discovery regarding how groups of people of varying size acquire information and solve problems involving spatiality as a key component leading to action that incorporates the spatial information and problem solving collectively achieved The collectives under study can be as small as dyads teams of two to large teams of teams who are working alongside each other to complete a mutual goal The book lays the foundation for multi and interdisciplinary work regarding Collective Spatial Cognition in the years to come and this book documents that foundation This book will be of interest to those researching spatial behavioural cognitive and information sciences in the fields of human geography sociology psychology and computer science **Imagery and Spatial Cognition** Tomaso Vecchi,Gabriella Bottini,2006-01-01 The relationships between perception and imagery imagery and spatial processes memory and action These are the main themes of this text The interest of experimental psychology and cognitive neuroscience on imagery and spatial cognition is remarkably increased in the last decades Different areas of research contribute to the clarification of the multiple cognitive processes subserving spatial perception and exploration and to the definition of the neurophysiological mechanisms underpinning these cognitive functions The aim of this book is to provide the reader post graduate students as well as experts with a complete overview of this field of research It illustrates the way how brain behaviour and cognition interact in normal and pathological subjects in perceiving representing and exploring space Series B **Spatial Cognition VI. Learning, Reasoning, and Talking about Space** Christian Freksa,Nora S. Newcombe,Peter Gärdenfors,Stefan Wölfl,2008-09-10 This book constitutes the refereed proceedings of the International Conference on Spatial Cognition Spatial Cognition 2008 held in Freiburg Germany in September 2008 The 27 revised full papers presented together with 3 invited lectures were carefully reviewed and selected from 54 submissions The papers are organized in topical sections on spatial orientation spatial navigation spatial learning maps and modalities spatial communication spatial language similarity and abstraction concepts and reference frames as well as spatial modeling and spatial reasoning **Spatial Cognition VII** Christoph Hölscher,Thomas F. Shipley,Marta Olivetti Belardinelli,John A Bateman,Nora S. Newcombe,2010-07-30 This is the seventh volume of a series of books on fundamental research in spatial cognition As with past volumes the research presented here spans a broad range of research traditions for spatial cognition concerns not just the basic spatial behavior of biological and artificial agents but also the reasoning processes that allow spatial planning across broad spatial and temporal scales Spatial information is critical for coordinated action and thus agents interacting with objects and moving among objects must be able to perceive spatial relations learn about these relations and act on them or store the information for later use either by themselves or communicated to others Research on this problem has included both psychology which works to understand how humans and other mobile organisms solve these problems and computer science which considers the nature of the information available in the world and a formal consideration of how these problems might be solved Research on human spatial cognition also involves the application of representations and processes that may have evolved to

handle object and location information to reasoning about higher order problems such as displaying non spatial information in diagrams Thus work in s tial cognition extends beyond psychology and computer science into many disciplines including geography and education The Spatial Cognition conference offers one of the few forums for consideration of the issues spanning this broad academic range   Spatial Cognition D. R. Olson,E. Bialystok,2014-03-18 First published in 1983 This is a volume in a series on Child Psychology This book offers a set of theoretical ideas which make up a quite general theory of the mental representation of space which accounts both for much of spatial perception but also much of spatial thought The system is general and economical and can be readily applied to novel problems as we illustrated in regard to Piaget s water level problem and Koler s letter recognition problem   **Spatial Cognition IV, Reasoning, Action, Interaction** C. Freksa,2005-03 This book constitutes the thoroughly refereed postproceedings of the International Conference on Spatial Cognition 2004 held in Fauenchiemsee Germany in October 2004 The 27 revised full papers presented were carefully reviewed and selected from 50 submissions The papers are organized in topical sections on route directions wayfinding and spatial behaviour description of space prepositions and reference meta models diagrams and maps spatial temporal representation and reasoning and robot mapping and piloting   From Geometry to Behavior Hanspeter A. Mallot,2024-01-23 An overview of the mechanisms and evolution of spatial cognition integrating evidence from psychology neuroscience cognitive science and computational geometry Understanding how we deal with space requires input from many fields including ethology neuroscience psychology cognitive science linguistics geography and spatial information theory In From Geometry to Behavior cognitive neuroscientist Hanspeter A Mallot provides an overview of the basic mechanisms of spatial behavior in animals and humans showing how they combine to support higher level performance Mallot explores the biological mechanisms of dealing with space from the perception of visual space to the constructions of large space representations that is the cognitive map The volume is also relevant to the epistemology of spatial knowledge in the philosophy of mind Mallot aims to establish spatial cognition as a scientific field in its own right His general approach is psychophysical in that it focuses on quantitative descriptions of behavioral performance and their real world determinants thus connecting to the work of theorists in computational neuroscience robotics and computational geometry After an overview of scientific thinking about space Mallot covers spatial behavior and its underlying mechanisms in the order of increasing memory involvement He describes the cognitive processes that underlie advanced spatial behaviors such as directed search wayfinding spatial planning spatial reasoning object building and manipulation and communication about space These mechanisms are part of the larger cognitive apparatus that also serves visual and object cognition understanding events actions and causality and social cognition which includes language Of all of these cognitive domains spatial cognition most likely occurred first in the course of evolution and is the most widespread throughout the animal kingdom
