

# The Supply Chain Journey Series:

## Candles

Candles usually contain 60 percent paraffin, 35 percent stearic acid, and 5 percent beeswax. When mixing the waxes together, many manufacturers also add scent extracts

**FUN FACT:** Bayberry wax is derived from the fruit of the bayberry bush and has a distinctive aroma making it especially popular for use at Christmas.

2

As with anything that is flammable, testing the quality of these candles is vital before they can be sold and shipped.

**FUN FACT:** Animal or vegetable fats were used for the first candles. As candle-making technology progressed, beeswax became widely used.

4

With these candles finally on shelves all over the world, all that's left is picking out your favorite one and letting the hard work and beautiful scent fill your home

**FUN FACT:** The global Candle Market was valued USD 6.8 Billion in 2021 and is all set to surpass USD 9.9 Billion by 2028.

1

Cotton or linen wicks are braided and treated with chemicals so they can bend at a 90 degree angle when burning. Wax is heated and melted into a clear, near-liquid state in huge metal kettles. Lastly, the wax is cooled and poured into a molding table so it can work its way into each mold carefully.

**FUN FACT:** An alternate method uses extrusion, a process in which crushed paraffin wax is forced through a heated steel die under extreme pressure.

3

After the candles are approved as high quality, manufacturers can then sell them to vendors, suppliers, and massive retailers to be shipped all around the globe. The shipping process for candles must be fast as weather conditions can melt or shrink candles and damage them.

**FUN FACT:** Large-scale manufacture of candles became a reality only after 1834, when Joseph Morgan introduced the first mass-production candle-making machine.
