**Frontiers in Question** Daniel Power, Naomi Standen, 1999-04-19 We are used to the idea that each state has clearly defined borders which cleanly separate different nationalities from one another What though were frontiers like before the evolution of the modern nation state The nine essays in this book seek to answer this question across a thousand years of Eurasian history Frontiers in Question Daniel J. Power, Naomi Standen, 1999-04-15 The nine essays in this book seek to answer the questions of what made a frontier between the ancient and modern eras how people imagined their frontiers and why historians have sometimes had very different ideas of what these frontiers were like The collection spreads across much of Europe and Asia familiar frontiers in Western Europe and around the Mediterranean Sea and includes examples from China Mesopotamia and Lithuania Ranging from the eighth to the seventeenth centuries the essays challenge us to rethink our modern notions of frontiers as neat lines intended to divide one state from another because frontiers in the past were often far more complex *Frontiers in Question* Daniel Power, Annotation We are used to the idea that each state has clearly defined borders which cleanly separate different nationalities from one another What though were frontiers like before the evolution of the modern nation state The nine essays in this book seek to answer this question across a thousand years of Eurasian history Frontiers in Question Daniel Power, Naomi Standen, 1999-04-19 We are used to the idea that each state has clearly defined borders which cleanly separate different nationalities from one another What though were frontiers like before the evolution of the modern nation state The nine essays in this book seek to answer this question across a thousand years of Eurasian history **Frontiers in Understanding Climate Change and Polar Ecosystems** National Research Council, Division on Earth and Life Studies, Polar Research Board, Committee for the Workshop on Frontiers in Understanding Climate Change and Polar Ecosystems, 2011-06-02 The polar regions are experiencing rapid changes in climate These changes are causing observable ecological impacts of various types and degrees of severity at all ecosystem levels including society Even larger changes and more significant impacts are anticipated As species respond to changing environments over time their interactions with the physical world and other organisms can also change This chain of interactions can trigger cascades of impacts throughout entire ecosystems Evaluating the interrelated physical chemical biological and societal components of polar ecosystems is essential to understanding their vulnerability and resilience to climate forcing The Polar Research Board PRB organized a workshop to address these issues Experts gathered from a variety of disciplines with knowledge of both the Arctic and Antarctic regions Participants were challenged to consider what is currently known about climate change and polar ecosystems and to identify the next big questions in the field A set of interdisciplinary frontier questions emerged from the workshop discussions as important topics to be addressed in the coming decades To begin to address these questions workshop participants discussed the need for holistic interdisciplinary systems approach to understanding polar ecosystem responses to climate change As an outcome of the workshop

participants brainstormed methods and technologies that are crucial to advance the understanding of polar ecosystems and to promote the next generation of polar research These include new and emerging technologies sustained long term observations data synthesis and management and data dissemination and outreach
