mapping which captures motion and color contrasts using spatio temporal gradients Model based techniques including Dynamic Local Orientation Cues DLOC and Markov Random Fields MRF to enforce spatial coherence and detect subtle yet salient features By fusing spatial temporal and semantic cues the framework creates robust saliency maps that guide scalable video encoding transmission and error recovery These techniques are particularly effective in dynamic multi hop environments like MANETs where packet loss latency and network instability are common Through detailed theoretical foundations algorithmic insights and performance evaluations using simulation tools this book equips readers with the knowledge and practical techniques to build more resilient intelligent video delivery systems
