Transit of Venus 2012 Transit of Venus opera Transit of Venus play Transit of Venus March Excerpt A transit of Venus across  
the Sun takes place when the planet Venus passes directly between the Sun and Earth or another planet becoming visible  
against and hence obscuring a small portion of the solar disk During a transit Venus can be seen from Earth as a small black  
disk moving across the face of the Sun The duration of such transits is usually measured in hours the transit of 2012 lasted 6  
hours and 40 minutes A transit is similar to a solar eclipse by the Moon While the diameter of Venus is more than 3 times  
that of the Moon Venus appears smaller and travels more slowly across the face of the Sun because it is much farther away  
from Earth Transits of Venus are among the rarest of predictable astronomical phenomena They occur in a pattern that  
generally repeats every 243 years with pairs of transits eight years apart separated by long gaps of 121 5 years and 105 5  
years The periodicity is a reflection of the fact that the orbital periods of Earth and Venus are close to 8 13 and 243 395  
commensurabilities The last transit of Venus was on 5 and 6 June 2012 and was the last Venus transit of the 21st century the  
prior transit took place on 8 June 2004 The previous pair of transits were in December 1874 and December 1882 The next
