Workshop Wisdom:

Wisdom's Workshop James Axtell, 2023-03-07 An essential history of the modern research university When universities began in the Middle Ages Pope Gregory IX described them as wisdom's special workshop He could not have foreseen how far these institutions would travel and develop Tracing the eight hundred year evolution of the elite research university from its roots in medieval Europe to its remarkable incarnation today Wisdom's Workshop places this durable institution in sweeping historical perspective In particular James Axtell focuses on the ways that the best American universities took on Continental influences developing into the finest expressions of the modern university and enviable models for kindred institutions worldwide Despite hand wringing reports to the contrary the venerable university continues to renew itself becoming ever more indispensable to society in the United States and beyond Born in Europe the university did not mature in America until the late nineteenth century Once its heirs proliferated from coast to coast their national role expanded greatly during World War II and the Cold War Axtell links the legacies of European universities and Tudor Stuart Oxbridge to nine colonial and hundreds of pre Civil War colleges and delves into how U S universities were shaped by Americans who studied in German universities and adapted their discoveries to domestic conditions and goals The graduate school the PhD and the research imperative became and remain the hallmarks of the American university system and higher education institutions around the globe A rich exploration of the historical lineage of today's research universities Wisdom's Workshop explains the reasons for their ascendancy in America and their continued international preeminence

Rationale Management in Software Engineering Allen H. Dutoit, Raymond McCall, Ivan Mistrik, Barbara Paech, 2007-02-02 Thirty years ago I first entered the dark realm of software engineering through a prior interest in documentation In those days documentation pretty much meant functional specifications The idea that stakeholders in a system its implementers its end users its maintainers and so forth might want something other than an alphabetic list of function definitions was just taking hold There was an exciting to me vision of stakeholders accessing and contributing to explanations of how and why aspects of a system work as they do tradeoff analysis of concomitant downsides and perhaps even accounts of why other possible approaches were not followed There were many challenges to overcome in achieving this vision The most formidable is the belief that people do not like to create or use documentation This negative image of documentation is unfortunately more than just the bias of a few incorrigible system developers It is more like a deep truth about human information behavior about how human beings construe and act towards information Humans are by default active users of information they want to try things out and get things done When documentation is interposed as a prerequisite between people and a desired activity they try to skip through it circumvent it or undermine it Designing information to suit the needs and interests of its users is an abiding challenge but we have come a long way from functional specifications as the only answer

Nakamori,2015-11-26 This book provides readers the idea of systemically synthesizing various kind of knowledge which
needs to combine analytical thinking and synthetic thinking Systems science is expected to help in solving contemporary
complex problems utilizing interdisciplinary knowledge effectively and combining analytical thinking and synthetic thinking
efficiently However traditional systems science has been divided into two schools one seeks a systematic procedure to give a
correct objective answer the other develops an emergent systemic process so that the user can continue exploratory learning
It is not an exaggeration to say that analytical thinking and synthetic thinking have been developed independently in different
schools This book integrates approaches developed in these two schools using ideas in knowledge science that have been
emerging recently under the influence of Eastern thinking It emphasizes the importance of utilizing intuition in systems
approaches whereas other books usually try to solve problems rationally and objectively rejecting subjectivity This book
never denies rationality and objectivity however complex problems of today do not always yield to complete analysis The
novelty of this present volume is that it takes in the ideas of synthetic thinking in knowledge science to develop systems
science further The chapter contributors who are experienced systems scientists with a profound understanding of
knowledge management discuss knowledge synthesis from the Western and Eastern cultural perspectives The book
introduces a theory on systemic knowledge synthesis in an odd chapter and then presents an application of the theory in the
next chapter in order to contribute to developing translational systems science Edinburgh Public Library. Catalogue of
