Neutrons and Related Gamma Ray Problems / Neutronen und Verwandte Gammastrahlprobleme Edoardo Amaldi, U. Fano, L. V. Spencer, M. J. Berger, 2012-12-06. 661. Tures such as occurs in stellar atmospheres and in thermonuclear processes will not be considered. 1. Because photoelectric absorption predominates completely at low photon energies and penetration theory is elementary under these conditions, attention is directed in this article to photon energies above 20 keV. On the high energy side, this article does not cover the cascade shower processes which are dealt with in cosmic ray studies. In this connection, it is recalled that the cascade shower process, which involves electrons and positrons, besides X-rays, becomes predominant above 10 MeV in heavy elements and above 100 MeV in light ones. Theories developed for the study of cascade showers in cosmic rays rely on assumptions about the probability of interactions with matter, which are

adequate only at energies of the order of 1 Gev or more Below this energy there is a gap in which penetration phenomena are qualitatively known and understood but have not yet been calculated in detail A few detailed experimental studies which have been made at energies up to 300 Mev will be reviewed in this article *New York* ,1982 *Car Book Value Guide* 1991 Thomas E.
