The Sixth Extinction Richard E. Leakey, Roger Lewin, 1995 Richard Leakey One Of The World s Foremost Experts On Man s Evolutionary Past Now Turns His Eye To The Future And Doesn t Like What He Sees To the philosophical the earth is eternal while the human race presumptive keeper of the world s history is a mere speck in the rich stream of life It is known that nothing upon Earth is forever geography climate and plant and animal life are all subject to radical change On five occasions in the past catastrophic natural events have caused mass extinctions on Earth But today humans stand alone in dubious distinction among Earth s species Homo Sapiens possesses the ability to destroy entire species at will to trigger the sixth extinction in the history of life In *The Sixth Extinction* Richard Leakey and Roger Lewin consider how the grand sprawl of human life is inexorably wreaking havoc around the world The authors of *Origins* and *Origins Reconsidered* unimpeachable authorities on the human fossil record turn their attention to the most uncharted anthropological territory of all the future and man s role in defining it According to Leakey and Lewin man and his surrounding species are end products of history and chance Now however humans have the unique opportunity to recognize their influence on the global ecosystem and consciously steer the outcome in order to avoid triggering an unimaginable upheaval

Humans Versus Nature Daniel R. Headrick, 2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment *Humans versus Nature* tells a history of the global environment from the Stone Age to the present emphasizing

the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past
