Stable Modules And The D2 Problem:

Essays in Constructive Mathematics Harold M. Edwards, 2022-09-29 Contents and treatment are fresh and very different from the standard treatments Presents a fully constructive version of what it means to do algebra The exposition is not only clear it is friendly philosophical and considerate even to the most naive or inexperienced reader [Abstracts of Papers Presented to the American Mathematical Society](#) American Mathematical Society, 2005

Probabilistic Machine Learning Kevin P. Murphy, 2022-03-01 A detailed and up to date introduction to machine learning presented through the unifying lens of probabilistic modeling and Bayesian decision theory This book offers a detailed and up to date introduction to machine learning including deep learning through the unifying lens of probabilistic modeling and Bayesian decision theory The book covers mathematical background including linear algebra and optimization basic supervised learning including linear and logistic regression and deep neural networks as well as more advanced topics including transfer learning and unsupervised learning End of chapter exercises allow students to apply what they have learned and an appendix covers notation Probabilistic Machine Learning grew out of the author's 2012 book Machine Learning A Probabilistic Perspective More than just a simple update this is a completely new book that reflects the dramatic developments in the field since 2012 most notably deep learning In addition the new book is accompanied by online Python code using libraries such as scikit learn JAX PyTorch and Tensorflow which can be used to reproduce nearly all the figures this code can be run inside a web browser using cloud based notebooks and provides a practical complement to the theoretical topics discussed in the book This introductory text will be followed by a sequel that covers more advanced topics taking the same probabilistic approach

Web Reasoning and Rule Systems Axel Polleres, Terrance Swift, 2009-10-14 The promise of the Semantic Web at its most expansive is to allow knowledge to be freely accessed and exchanged by software It is now recognized that if the Semantic Web is to contain deep knowledge the need for new representation and reasoning techniques is going to be critical These techniques need to find the right trade off between expressiveness scalability and robustness to deal with the inherently incomplete contradictory and uncertain nature of knowledge on the Web The International Conference on Web Reasoning and Rule Systems RR was founded to address these needs and has grown into a major international forum in this area The third RR conference was held during October 25-26 2009 in Chantilly Virginia co-located with the International Semantic Web Conference ISWC 2009 This year 41 papers were submitted from authors in 21 countries The Program Committee performed outstandingly to ensure that each paper submitted to RR 2009 was thoroughly reviewed by at least three referees in a short period of time The resulting conference presented papers of high quality on many of the key issues for reasoning on the Semantic Web RR 2009 was fortunate to have two distinguished invited speakers Robert Kowalski in his talk Integrating Logic Programming and Production Systems with Abductive Logic Programming Agents addressed some of the fundamental considerations hind reasoning about evolving systems Benjamin Gross's talk SILK Higher Level Rules with Defaults and

Vladimir Vasil'evich Sharko, 1993 This monograph covers in a unified manner new results on smooth functions on manifolds A major topic is Morse and Bott functions with a minimal number of singularities on manifolds of dimension greater than five Sharko computes obstructions to deformation of one Morse function into another on a simply connected manifold In addition a method is developed for constructing minimal chain complexes and homotopical systems in the sense of Whitehead This leads to conditions under which Morse functions on non simply connected manifolds exist Sharko also describes new homotopical invariants of manifolds which are used to substantially improve the Morse inequalities The conditions guaranteeing the existence of minimal round Morse functions are discussed **Mathematical Reviews**, 2008

Johnson,2003-09-11 This 2003 book is concerned with two fundamental problems in low dimensional topology Firstly the D 2 problem which asks whether cohomology detects dimension and secondly the realization problem which asks whether every algebraic 2 complex is geometrically realizable The author shows that for a large class of fundamental groups these problems are equivalent Moreover in the case of finite groups Professor Johnson develops general methods and gives complete solutions in a number of cases In particular he presents a complete treatment of Yoneda extension theory from the viewpoint of derived objects and proves that for groups of period four two dimensional homotopy types are parametrized by isomorphism classes of projective modules This book is carefully written with an eye on the wider context and as such is suitable for graduate students wanting to learn low dimensional homotopy theory as well as established researchers in the field **Mathematics of the USSR.** ,1969 **Proceedings** ,1982 Digest of Technical Papers ,1999 Proceedings of the ...
