Analysis and Design of Univariate Subdivision Schemes Malcolm Sabin, 2010-08-16 Subdivision is a way of representing smooth shapes in a computer A curve or surface both of which contain an infinite number of points is described in terms of two objects One object is a sequence of vertices which we visualise as a polygon for curves or a network of vertices which we visualise by drawing the edges or faces of the network for surfaces The other object is a set of rules for making denser sequences or networks When applied repeatedly the denser and denser sequences are claimed to converge to a limit which is the curve or surface that we want to represent This book focusses on curves because the theory for that is complete enough that a book claiming that our understanding is complete is exactly what is needed to stimulate research proving that claim wrong Also because there are already a number of good books on subdivision surfaces The way in which the limit curve relates to the polygon and a lot of interesting properties of the limit curve depend on the set of rules and this book is about how one can deduce those
