Working With Visible Analysis:

Making Work Visible Margaret H. Szymanski, Jack Whalen, 2011-03-31 An overview of Xerox's social science tradition with detailed case studies that show how client engagement was conducted over time

Making Administrative Work Visible Leigh Graziano, Kay Halasek, Remi Hudgins, Susan Miller-Cochran, Frank Napolitano, Natalie Szymanski, 2023-05-15 Making Administrative Work Visible brings together voices from graduate students, associated faculty, administrative staff, and tenured and tenure track faculty at community colleges, regional state universities, liberal arts colleges, private colleges, and research intensive institutions across the country to speak to the challenges both named and unnamed faced by those who do writing program administration work. These authors call explicit attention to this work and examine WPAs' lived labor experiences and research methodologies to truly understand the scope of lived WPA labor. The collection has three parts, each of which focuses on the most confounding challenges facing WPAs, as well as the most compelling sites of their contributions to administration labor in higher education and the discipline's collective obligation to forwarding the goals of social justice and advocacy. *Advocating through Representations of WPA Labor*, *Advocating by Accounting for Time and Labor*, and *Advocating in and through Complex Institutional Contexts*. The chapters use data to share and track the work functions, job titles, grand narratives, program assessments, tenure and promotion email practices, and more undertaken by WPAs in their administrative capacities. Chapters also surface narratives for future data and studies to be done by other scholars. By taking up and answering questions about the range of WPA work and the invisibility of much of that work, *Making Administrative Work Visible* creates avenues toward accounting for and acknowledging the complex activity systems in which WPAs lead the work of the university and advocate for data-driven strategies needed to sustain this foundational area of higher education.

Visibility Analysis Dendron Resource Surveys Inc., Northern Forestry Program (Canada), 1994 Northern Ontario waterways and the land bordering them are the source of many values among them recreation or logging. A methodology that includes geographic information system (GIS) and field photogrammetry technologies and addresses the operational requirements of resource managers was developed to identify potential areas of conflict between visual and other values and to assist in the development of alternatives for integrated resource management planning efforts. A project was conducted in Thistle Township to the north and west of Thistle Lake and Red Cedar Lake in the North Bay District. An initial GIS assessment of

forested areas theoretically visible from the lakes was made and demonstration materials prepared to explain project concepts to stakeholder groups during the values assessment process and to prepare for the field exercise Interviews were conducted with three key stakeholder groups Potential conflict areas were identified and a detailed analysis of them was made This report describes the methods used and provides recommendations on streamlining the process and improving the technology
