Song Trials:

The Impact of Music on Human Development and Well-Being Michele Biasutti, Graham F. Welch, Jennifer MacRitchie, Gary E. McPherson, Evangelos Himonides, 2020-07-17 Music is one of the most universal ways of expression and communication in human life and is present in the everyday lives of people of all ages and from all cultures around the world Music represents an enjoyable activity in and of itself but its influence goes beyond simple amusement Listening to music singing playing composing and improvising individually and collectively are common activities for many people these activities not only allow the expression of personal inner states and feelings but also can bring many positive effects to those who engage in them There is an increasing wealth of literature concerning the wider benefits of musical activity and research in the sciences associated with music suggests that there are many dimensions of human life physical social psychological including cognitive and emotional which can be affected positively by music The impact that musical activity has on human life can be found in different processes including a transfer of learning from the musical to another cognitive domain Abilities that have been developed through music education and training may also be effectively applied in other cognitive tasks Engagement in successful music activity may also have a positive impact on social skills and social inclusion thus supporting the participation of the individual in collective and collaborative musical events The promotion of social participation through music can foster many kinds of inclusion including intercultural intergenerational and support for those who are differently abled The aim of this Research Topic is to present a diverse range of original articles that investigate and discuss in different ways the crucial role that musical activity can play in human development and well being **Free Press and Fair Trial** United States. Fitness Costs and Benefits of Female Song Michelle L. Hall, Naomi E. Langmore, 2017-09-11 Bird song traditionally regarded as primarily a male trait is in fact widespread among female songbirds and was probably present in the ancestor of modern songbirds Odom et al 2014 Nature Communications These recent findings challenge the view that sexual dimorphism in the expression and complexity of song is largely the outcome of sexual selection on males It is now clear that understanding the evolution of bird song requires explaining variation within and among species in the expression and complexity of female song To do this we need a better understanding of the nature of variation in female song in different contexts and systems as well as the fitness costs and benefits of variation in the expression and complexity of female song This Research Topic draws together current research on female song with the goal of understanding the fitness costs and benefits of the diversity of female singing behaviour apparent among songbirds It includes articles ranging from single species studies investigating how female song varies with context and contrasts with male song to comparative analyses exploring relationships between female song and ecological social and other factors as well as opinion pieces
