Space Weapons Earth Wars, 2002

Space weapons for terrestrial conflict have been the subject of intense debate twice in the modern history of space The first time at the beginning of the Cold War was over the possibility of bombardment satellites carrying nuclear weapons The second time at the end of the Cold War was over the possibility of space based defenses against nuclear missiles Now well past the Cold War the topic of space weapons seems headed again for public debate this time based on ballistic missile defense National policy documents tacitly include the development of advanced technology to improve ballistic missile defense options The latest space policy document from the Department of Defense Cohen 1999 supports ballistic missile defense and force projection To this end the United States is developing space based laser technology which is approaching the demonstration phase For these reasons as well as the threat that space weapons could pose if developed by an adversary it is time for public discussion of the subject This report does not present an argument either for or against space weapons but instead describes their attributes and sets out a common vocabulary for future discussions The report classifies and compares these weapons and explains how they might be used It also explores ways in which the United States and other countries might decide to acquire them and the potential reaction of other countries if the United States or some other nation fielded such weapons

The report dispels some of the myths regarding space weapons to help ensure that debates and discussions are more fact based

Space Warfare in the 21st Century Joan Johnson-Freese, 2016-11-08 This book examines the recent shift in US space policy and the forces that continually draw the US back into a space technology security dilemma The dual use nature of the vast majority of space technology meaning of value to both civilian and military communities and being unable to differentiate offensive from defensive intent of military hardware makes space an area particularly ripe for a security dilemma In contrast to previous administrations the Obama Administration has pursued a less militaristic space policy instead employing a strategic restraint approach that stressed multilateral diplomacy to space challenges The latter required international solutions and the United States subsequently even voiced support for an International Code of

Conduct for Space That policy held until the Chinese anti satellite ASAT test in 2013 which demonstrated expanded Chinese capabilities This volume explores the issues arising from evolving space capabilities across the world and the security challenges this poses It subsequently discusses the complexity of the space environment and argues that all tools of national power must be used with some degree of balance toward addressing space challenges and achieving space goals This book will be of much interest to students of space policy defence studies foreign policy security studies and IR
