**Abstract:** As the tourism industry is embedded in the countryside, space, which is an important means of production of modern industries, has undergone significant changes in the models and trends of spatial transform. This paper aims to analyze the development pattern of rural economic and social structure driven by the tourism industry. Based on the spatial syntax model, it takes Matao Village of China as the research sample and decomposes the evolutionary process of rural space transform. Firstly (1) in the self-driven development stage, the rural space presented a polar core development trend with high intelligibility and obvious agglomeration. Secondly (2) in the tourism-driven development stage, firstly, the driving force of the tourism industry was relatively weak, whereas the traditional spatial core still occupied an absolute advantage in the whole village space. However, with further development, the spatial scope of high Integration and Choice Values has expanded, resulting in multiple spatial development agglomeration centers. Based on this, it is proposed that a village with a tourism industry should integrate village spatial development planning with landscape style, focus on the regeneration and development of the old space core, and strengthen the integration and correlation of the old and new space clusters.

## 1. Introduction

With the gradual adjustment of global economic and industrial structure, the constant intensification of urbanization and the promotion of informatization, rural spaces are facing a critical period of aggravated change, reconstruction and reorganization [1]. The strategy of “developing multiple forms of appropriate scale management” and “promoting the integrated development of the primary, secondary and tertiary industries in rural areas” promoted the transformation of the rural spatial development mode from a single path and homogeneity to multiple development and heterogeneity. The social capital, state power, foreign tourists and other complex interest subjects brought by rural tourism and the various modernity and mobility forces involved behind them have rapidly and forcefully flooded into rural spaces [2]. Those elements promote the functional change and structural reorganization of rural space and are becoming the core driving force to drive the transformation of rural space rapidly and forcefully [3]. In addition, relative closure of rural space has been broken, and the distribution, organizational form, carried function and transformation pattern of space have all changed significantly [4,5]. Driven by the tourism industry, rural settlement space has focused on the development trend of consumerization and commoditization, exploring differentiated space steering paths and presenting a variety of scenarios, which led to many new industries, new forms and new business models [6,7].

Space as a whole enters into the production model of modern tourism: the land, the underground, the air, and even the light are incorporated into the productivity and
