Spatial Modelling Of The Terrestrial Environment:

Spatial Modelling of the Terrestrial Environment Richard E. J. Kelly, Nicholas A. Drake, Stuart L. Barr, 2004-05-28

Understanding and predicting the behaviour of natural and human environmental systems is crucial for the effective management of the Earth's limited resources. Recently great advances have been made through spatial modelling. This book provides a snapshot of the latest research in modelling technologies and methodologies within five environmental fields: the cryosphere, hydrology, geomorphology, vegetation interfaces, and urban environments. Spatial Modelling of the Terrestrial Environment deals with the use of remote sensing, numerical models, and GIS in addressing important natural and human environmental sciences issues, focusing on the theory and application of modelling remotely sensed data within the context of environmental processes. Extensive case material exemplifies the latest research and modelling paradigms presented in the book.

Environmental Modelling John Wainwright, Mark Mulligan, 2013-01-22. Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines. Central to the concept of this second edition is the idea that environmental systems are complex open systems. The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines. Environmental Modelling: Finding Simplicity in Complexity 2nd edition is divided into four main sections: An overview of methods and approaches to modelling; State of the art for modelling environmental processes; Tools used and models for management; Current and future developments. The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling. This edition focuses on simplifying complex environmental systems. Reviews current software tools and techniques for modelling. Gives practical examples from a wide variety of disciplines, e.g. climatology, ecology, hydrology, geomorphology, and engineering. Has an associated website containing colour images, links to WWW resources, and chapter support pages including data sets relating to case studies, exercises, and model animations. This book is suitable for final year undergraduates and postgraduates in environmental modelling, environmental science, civil engineering, and biology who will

already be familiar with the subject and are moving on to specialize in the field It is also designed to appeal to professionals interested in the environmental sciences including environmental consultants government employees civil engineers geographers ecologists meteorologists and geochemists

Modelling Land-Use Change Eric Koomen,John Stillwell,Aldrik Bakema,Henk J. Scholten,2007-08-08 Models of land use change incorporate a vast amount of knowledge from a wide range of disciplines Geography contributes to the understanding of land use change whilst demography and economics help explain underlying trends This book offers a cross sectional overview of current research progress that allows the construction of successful land use models The contributions range from methodology and calibration to actual applications in studies of recent policy implementation and evaluation The contributors originate from academic and applied research institutes around the world and thus offer an interesting mix of theory and practice in different case study contexts In summary land use change simulation modelling is a relatively new and dynamic field of study and this book provides a full overview of the topic a wide range of applications both geographically and thematically a mix of theory and practice a synthesis of recent research progress and educational material for students and teachers

Representing, Modeling, and Visualizing the Natural Environment Nick Mount,Gemma Harvey,Paul Aplin,Gary Priestnall,2008-12-22 The explosion of public interest in the natural environment can to a large extent be attributed to greater public awareness of the impacts of global warming and climate change This has led to increased research interest and funding directed at studies of issues affecting sensitive natural environments Not surprisingly much of this work has re
