the Works of Samuel Butler: Unconscious memory Samuel Butler, 1924      *The Unconscious* Israel Levine, 1923

*Unconscious Memory* Samuel Butler, 2014-10-10 *Unconscious Memory* was largely written to show the relation of Butler's views to Hering's and contains an exquisitely written translation of the Address Hering does indeed anticipate Butler and that in language far more suitable to the persuasion of the scientific public. It contains a subsidiary hypothesis that memory has for its mechanism special vibrations of the protoplasm and the acquired capacity to respond to such vibrations once felt upon their repetition. I do not think that the theory gains anything by the introduction of this even as a mere formal hypothesis and there is no evidence for its being anything more. Butler however gives it a warm and enthusiastic reception in Chapter V Introduction to Professor Hering's lecture and in his notes to the translation of the Address which bulks so large in this book but points out that he was not committed to this hypothesis though inclined to accept it on a prima facie view. Later on as we shall see he attached more importance to it. The Hering Address is followed in *Unconscious Memory* by translations of selected passages from Von Hartmann's *Philosophy of the Unconscious* and annotations to explain the difference from this personification of The Unconscious as a mighty all ruling all creating personality and his own scientific recognition of the great part played by unconscious processes in the region of mind and memory. These are the essentials of the book as a contribution to biological philosophy. The closing chapters contain a lucid statement of objections to his theory as they might be put by a rigid necessitarian and a refutation of that interpretation as applied to human action. But in the second chapter Butler states his recession from the strong logical position he had hitherto developed in his writings from *Erewhon* onwards so far he had not only distinguished the living from the non living but distinguished among the latter machines or tools from things at large. Machines or tools are the external organs of living beings as organs are their internal machines they are fashioned assembled or selected by the beings for a purpose so they have a future purpose as well as a past history. Things at large have a past history but no purpose so long as some being does not convert them into tools and give them a purpose. Machines have a Why as well as a How things at large have a How only. In *Unconscious Memory* the allurements of unitary or monistic views have gained the upper hand and Butler writes p 23 The only thing of which I am sure is that the distinction between the organic and inorganic is arbitrary that it is more coherent with our other ideas and therefore more acceptable to start with every molecule as a living thing and then deduce death as the breaking up of an association or corporation than to start with inanimate molecules and smuggle life into them and that therefore what we call the inorganic world must be regarded as up to a certain point living and instinct within certain limits with consciousness volition and power of concerted action. It is only of late however that I have come to this opinion. I have italicised the last sentence to show that Butler was more or less conscious of its irreconcilability with much of his most characteristic doctrine. Again in the closing chapter Butler writes p 275 We should endeavour to see the so called inorganic as living in respect of the qualities it has in common with the organic rather than the organic as non living in respect of the qualities it has in common with the inorganic.
