*IP Networking over Next-Generation Satellite Systems* Linghang Fan,Haitham Cruickshank,Zhili Sun,2007-12-19 With the boom of Internet IP based applications such as WWW and multimedia have been an essential part of our life and there is an ever increasing demand for accessing high speed Internet services anywhere and anytime This trend unavably has huge impact on the design of the next generation satellite systems In addition with its broadcasting nature and global coverage satellite systems also can play an important role in the next

generation Internet For example satellite systems can be a good driver for the deployment of IPv6 in the Internet and can provide a fast way to reach end users because they do not rely on construction of a high speed terrestrial networks Thus satellites have the potential to bridge significant gaps in global connectivity issues To the naive observer IP over satellite problem has been solved in the past and does not have any new challenges However recent satellite research in several EU projects show that there are still many unresolved issues such as efficient deployment of IPv6 over satellites interworking with other access technologies such as WLAN and WiMax QoS provisioning over multi segment networks including satellites security and On Board Processing satellites usage for challenging applications such as IP multicast over satellites The papers in this book were selected from the International Workshop on IP Networking over Next generation Satellite Systems INNSS 07 which was held on July 5 2007 in Budapest Hungary as a part of the 16th IST Mobile and Wireless Communications Summit conference
