Keith J. Devlin, 2017-03-16 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published  
seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now  
in print once again In this volume the sixth publication in the Perspectives in Logic series Keith J Devlin gives a  
comprehensive account of the theory of constructible sets at an advanced level The book provides complete coverage of the  
theory itself rather than the many and diverse applications of constructibility theory although applications are used to  
motivate and illustrate the theory The book is divided into two parts Part I Elementary Theory deals with the classical  
definition of the L hierarchy of constructible sets and may be used as the basis of a graduate course on constructibility theory  
and Part II Advanced Theory deals with the J hierarchy and the Jensen fine structure theory      **Some Characterizations of**  
**Souslin's Problem** Frances Elizabeth Blount, 1971      **Handbook of the History of General Topology** C.E. Aull, R.  
Lowen, 2013-04-18 This book is the first one of a work in several volumes treating the history of the development of topology  
The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and  
work of individual topologists with specific schools of topology with research in topology in various countries and with the  
development of topology in different periods The work is not restricted to topology in the strictest sense but also deals with  
applications and generalisations in a broad sense Thus it also treats e g categorical topology interactions with functional  
analysis convergence spaces and uniform spaces Written by specialists in the field it contains a wealth of information which  
is not available anywhere else      **General Topology** Stephen Willard, 2012-07-12 Among the best available reference  
introductions to general topology this volume is appropriate for advanced undergraduate and beginning graduate students  
Includes historical notes and over 340 detailed exercises 1970 edition Includes 27 figures      Set Theory, Arithmetic, and  
Foundations of Mathematics Juliette Kennedy, Roman Kossak, 2011-09-01 This collection of papers from various areas of  
mathematical logic showcases the remarkable breadth and richness of the field Leading authors reveal how contemporary  
technical results touch upon foundational questions about the nature of mathematics Highlights of the volume include a  
history of Tennenbaum's theorem in arithmetic a number of papers on Tennenbaum phenomena in weak arithmetics as well  
as on other aspects of arithmetics such as interpretability the transcript of Gödel's previously unpublished 1972-1975  
conversations with Sue Toledo along with an appreciation of the same by Curtis Franks Hugh Woodin's paper arguing  
against the generic multiverse view Anne Troelstra's history of intuitionism through 1991 and Aki Kanamori's history of the  
Suslin problem in set theory The book provides a historical and philosophical treatment of particular theorems in arithmetic

and set theory and is ideal for researchers and graduate students in mathematical logic and philosophy of mathematics
