Jolly,2002 *Libration Point Orbits And Applications - Proceedings Of The Conference* Gerard Gomez,Josep J Masdemont,Martin W Lo,2003-05-07 This book presents the state of the art in numerical and analytical techniques as well as future trends associated with mission design for libration point orbits It contains papers explaining theoretical developments and their applications including the accurate description of some actual libration point missions of ESA and NASA The existing software in the field and some applications beyond the neighborhood of the Earth are also presented Special emphasis is placed on the use of dynamical systems methodology in the libration point orbits mission design

Fundamentals of Astrodynamics and Applications D.A. Vallado,2001-06-30 *Fundamentals of Astrodynamics and Applications* is rapidly becoming the standard astrodynamics reference for those involved in the business of spaceflight What sets this book apart is that nearly all of the theoretical mathematics is followed by discussions of practical applications implemented in tested software routines For example the book includes a compendium of algorithms that allow students and professionals to determine orbits with high precision using a PC Without a doubt when an astrodynamics problem arises in the future it will become standard practice for engineers to keep this volume close at hand and look it up in Vallado While the first edition was an exceptionally useful and popular book throughout the community there are a number of reasons why the second edition will be even more so There are many reworked examples and derivations Newly introduced topics include ground illumination calculations Moon rise and set and a listing of relevant Internet sites There is an improved and expanded discussion of coordinate systems orbit determination and differential correction Perhaps most important is that all of the software routines described in the book are now available for free in FORTRAN PASCAL and C This makes the second edition an even more valuable text and superb reference Space debris and space traffic management symposium 2005 Joerg Bendisch,2006 **Low-Energy Lunar Trajectory Design** Jeffrey S. Parker,Rodney L. Anderson,2014-06-03 Based on years of research conducted at the NASA Jet Propulsion Laboratory *Low Energy Lunar Trajectory Design* provides high level information to mission managers and detailed information to mission designers about low energy transfers between Earth

and the moon The book answers high level questions about the availability and performance of such transfers in any given month and year Low energy lunar transfers are compared with various other types of transfers and placed within the context of historical missions Using this book designers may reconstruct any transfer described therein as well as design similar transfers with particular design parameters An Appendix Locating the Lagrange Points and a useful list of terms and constants completes this technical reference Surveys thousands of possible trajectories that may be used to transfer spacecraft between Earth and the moon including transfers to lunar libration orbits low lunar orbits and the lunar surface Provides information about the methods models and tools used to design low energy lunar transfers Includes discussion about the variations of these transfers from one month to the next and the important operational aspects of implementing a low energy lunar transfer Additional discussions address navigation station keeping and spacecraft systems issues
