Sparse Distributed Memory:

Sparse Distributed Memory Pentti Kanerva, 1988 Motivated by the remarkable fluidity of memory the way in which items are pulled spontaneously and effortlessly from our memory by vague similarities to what is currently occupying our attention Sparse Distributed Memory presents a mathematically elegant theory of human long term memory The book which is self contained begins with background material from mathematics computers and neurophysiology this is followed by a step by step development of the memory model The concluding chapter describes an autonomous system that builds from experience an internal model of the world and bases its operation on that internal model Close attention is paid to the engineering of the memory including comparisons to ordinary computer memories Sparse Distributed Memory provides an overall perspective on neural systems The model it describes can aid in understanding human memory and learning and a system based on it sheds light on outstanding problems in philosophy and artificial intelligence Applications of the memory are expected to be found in the creation of adaptive systems for signal processing speech vision motor control and in general robots Perhaps the most exciting aspect of the memory in its implications for research in neural networks is that its realization with neuronlike components resembles the cortex of the cerebellum Pentti Kanerva is a scientist at the Research Institute for Advanced Computer Science at the NASA Ames Research Center and a visiting scholar at the Stanford Center for the Study of Language and Information A Bradford Book **A View of Kanerva's Sparse Distributed Memory**, 1986

Sparse Distributed Memory National Aeronautics and Space Administration (NASA), 2018-07-16 Sparse distributed memory is a generalized random access memory RAM for long 1000 bit binary words Such words can be written into and read from the memory and they can also be used to address the memory The main attribute of the memory is sensitivity to similarity meaning that a word can be read back not only by giving the original write address but also by giving one close to it as measured by the Hamming distance between addresses Large memories of this kind are expected to have wide use in speech recognition and scene analysis in signal detection and verification and in adaptive control of automated equipment in general in dealing with real world information in real time The memory can be realized as a simple massively parallel computer Digital technology has reached a point where building large memories is becoming practical Major design issues were resolved which were faced in building the memories The design is described of a prototype memory with 256 bit addresses and from 8 to 128 K locations for 256 bit words A key aspect of the design is extensive use of dynamic RAM and other standard components Flynn M J and Kanerva P and Bhadkamkar N Unspecified Center [An Alternative Design for a Sparse Distributed Memory](#) Research Institute for Advanced Computer Science (U.S.), 1989 *Sparse Distributed Memory and Related Models* Pentti Kanerva, Research Institute for Advanced Computer Science (U.S.), 1992 Abstract This paper describes sparse distributed memory SDM as a neural net associative memory It is characterized by two weight matrices and by a large internal dimension the number of hidden units is much larger than the number of input or output units The first matrix A is fixed and possibly random and the second matrix C is modifiable The paper compares and contrasts SDM to 1 computer memory 2 correlation matrix memory 3 feed forward artificial neural network 4 cortex of the cerebellum 5 Marr and Albus models of the cerebellum and 6 Albus cerebellar model arithmetic computer CMAC Several variations of the basic SDM design are discussed the selected coordinate and hyperplane designs of Jaeckel the pseudorandom associative neural memory of Hassoun and SDM with real valued input variables by Prager and Fallside SDM research conducted mainly at RIACS in 1986 1991 is highlighted [Statistical Prediction with Kanerva's Sparse Distributed Memory](#) National Aeronautics and Space Adm Nasa, 2019-01-04 A new viewpoint of the processing performed by Kanerva's sparse distributed memory SDM is presented In conditions of near or over capacity where the associative memory behavior of the model breaks down the processing performed by the model can be interpreted as that of a statistical predictor Mathematical results are presented which serve as the framework for a new statistical viewpoint of sparse distributed memory and for which the standard
