Semantic Relations and the Lexicon M. Lynne Murphy, 2003-10-02 *Semantic Relations and the Lexicon* explores the many paradigmatic semantic relations between words such as synonymy antonymy and hyponymy and their relevance to the mental organization of our vocabularies Drawing on a century s research in linguistics psychology philosophy anthropology and computer science M Lynne Murphy proposes a pragmatic approach to these relations Whereas traditional approaches have claimed that paradigmatic relations are part of our lexical knowledge Dr Murphy argues that they constitute metalinguistic knowledge which can be derived through a single relational principle and may also be stored as part of our extra lexical conceptual representations of a word Part I shows how this approach can account for the properties of lexical relations in ways that traditional approaches cannot and Part II examines particular relations in detail This book will serve as an informative handbook for all linguists and cognitive scientists interested in the mental representation of vocabulary

The Architecture of Cognition Paco Calvo, John Symons, 2014-04-18

Philosophers and cognitive scientists reassess systematicity in the post connectionist era offering perspectives from ecological psychology embodied and distributed cognition enactivism and other methodologies In 1988 Jerry Fodor and Zenon Pylyshyn challenged connectionist theorists to explain the systematicity of cognition In a highly influential critical analysis of connectionism they argued that connectionist explanations at best can only inform us about details of the neural substrate explanations at the cognitive level must be classical insofar as adult human cognition is essentially systematic More than twenty five years later however conflicting explanations of cognition do not divide along classicist connectionist lines but oppose cognitivism both classicist and connectionist with a range of other methodologies including distributed and embodied cognition ecological psychology enactivism adaptive behavior and biologically based neural network theory This volume reassesses Fodor and Pylyshyn's systematicity challenge for a post connectionist era The contributors consider such questions as how post connectionist approaches meet Fodor and Pylyshyn's conceptual challenges whether there is empirical evidence for or against the systematicity of thought and how the systematicity of human thought relates to behavior The chapters offer a representative sample and an overview of the most important recent developments in the systematicity debate Contributors Ken Aizawa William Bechtel Gideon Borensztajn Paco Calvo Anthony Chemero Jonathan D Cohen Alicia Coram Jeffrey L Elman Stefan L Frank Antoni Gomila Seth A Herd Trent Kriete Christian J Lebiere Lorena Lobo Edouard Machery Gary Marcus Emma Mart n Fernando Mart nez Manrique Brian P McLaughlin Randall C O Reilly Alex A Petrov Steven Phillips William Ramsey Michael Silberstein John Symons David Travieso William H Wilson Willem Zuidema
